ACKNOWLEDGMENTS

The authors thank Lori A. Melroy, a former research associate with the University of Tennessee, Krista Dearstone, and Charlotte Broders for providing data management services. J. R. Jones provided assistance in field servicing of equipment and in collecting and processing the Ish Creek precipitation data, and word processing support was furnished by Pat Buntrock.

ABSTRACT

CLAPP, R. B., and B. J. FREDERICK. 1988. Precipitation and Streamflow in the Vicinity of West Chestnut Ridge near Oak Ridge National Laboratory, Oak Ridge, Tennessee (October 1985-March 1988). ORNL/TM-10936. Oak Ridge National Laboratory, Oak Ridge, Tennessee. 80 pp.

The West Chestnut Ridge area is under consideration for development of a new waste disposal facility for either solid waste or low-level radioactive waste. As part of the site characterization, this report contains hydrologic data collected over a 2 1/2-year period (October 1985 through March 1988). The most significant event in the hydrologic record was the continuation of the drought conditions that began after the heavy rains of May 1984. Relative to normal annual rainfall, the precipitation deficit for water year 1986 was 18.08 in. (461.77 mm), and the deficit for 1987 was 7.92 in. (201.10 mm). For the first six months of water year 1988 the deficit was 11.72 in. (297.77 in.). For the period of record, daily average streamflow is reported for five gaging stations. Eighty-four percent of the daily values are considered good, which means within 10% of the true value. Only 0.3% (or 15 station days) are not within 15%, and these data were associated with incidences in which flume capacity was exceeded or with erratic flow behavior. The ratio of runoff per unit watershed area to precipitation is reported for the basins above each gaging station.

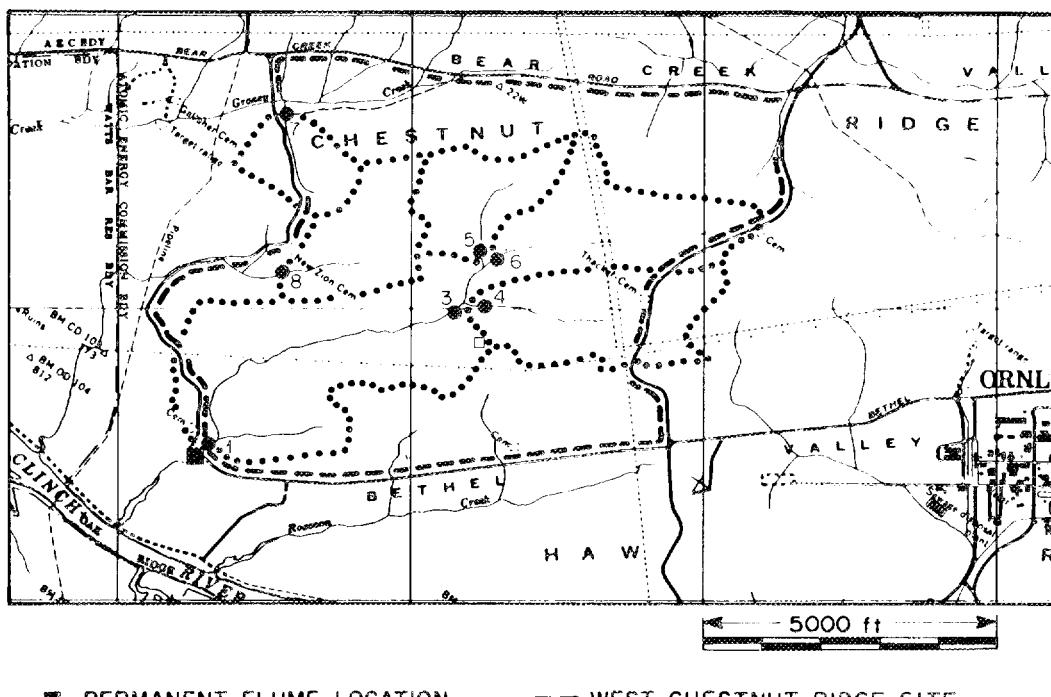

1. INTRODUCTION

The objective of this report is to present streamflow and precipitation data for the period October 1985 through March 1988, at sites located on West Chestnut Ridge (Fig. 1), near Oak Ridge National Laboratory. These data were collected as part of site characterization activities managed by the Low-level Waste Disposal Development and Demonstration (LLWDDD) program. Site characterization is required because West Chestnut Ridge is under consideration for development of a waste disposal facility for either solid waste or low level radioactive waste. In the early 1980's this area was under consideration as a site for a disposal facility for low level radioactive wastes generated at all three plants on the Oak Ridge reservation. Although that plan was never implemented the names of the hydrologic gaging stations are still known as the Central Waste Disposal Facility (CWDF) station 1, 2, etc.

Reports by Huff et al. (1984) and Elmore et al. (1985) present data collected in this vicinity prior to October 1983. Reports by Huff and Frederick (1984 and 1987) present streamflow and precipitation data for the period October 1983 through September 1985 and include detailed descriptions of equipment installed at each site and discussion of the methods used in converting field data to streamflow. Because these streamflow records were collected on watersheds relatively unaffected by works of man, they are especially important in determining the natural precipitation-runoff relationship for the area. Consequently, they provide valuable baseline data for comparison regulated basins. Work presented here documents data collection activities for the period October 1, 1985, through March 31, 1988. Summaries presented are primarily daily averages, with records collected at 15-min intervals. Arrangements may be made to obtain unit record data by contacting the Environmental Sciences Division, Hydrologic Data Center. Data are stored on floppy disks. Data for site CWDF 1 are IBM PC compatible for the entire period, but data for other sites are formatted for processing by Apple IIe computer up to

CWDF SITE: SURFACE WATER HYDROLOGIC CHARACTERIZATION PLAN

- PERMANENT FLUME LOCATION
- FLUME
- RAINGAUGE
- WEST CHESTNUT RIDGE SITE
- ... CWDF CATCHMENT, SUBCATCHMENTS
- SURFACE STREAMS

Fig. 1. Location of Streamflow gaging stations on West Chestnut Ridge.

March 4, 1988. Beginning March 4, 1988, data for all sites are IBM PC-compatible. Processing programs are modifications of ones obtained from Manning Technologies, Inc., for the Apple computer, and from Leopold Stevens, Inc., for the IBM PC-compatible data.

The precipitation data were collected at the Ish Creek gaging station (Fig. 1). Hourly or daily values of precipitation are available also by contacting the Hydrologic Data Center.

Mean daily flow rates for all five sites and daily precipitation are tabulated by month (Appendix A), and all data are given in SI units. In addition, the same data are organized by water year and given in American customary units (Appendix B). The use of American customary units was requested by LLWDDD personnel in order to be consistent with other site characterization reports in which these units are used exclusively.

2. GENERAL SUMMARY OF HYDROLOGIC CONDITIONS

2.1 WATER YEAR 1986

The drought conditions that began after the heavy rains in May 1984 continued. Normal rainfall was determined by using the 30-year period 1951 through 1980. Only one month during the water year had rainfall significantly above normal, August, when precipitation was 1.18 in. (29.97 mm) greater than the 3.69-in. (93.73-mm) normal for August. Three other months recorded slightly above normal: October, with 0.08 in. (2.03 mm) above the 3.06-in. (77.72-mm) normal; November, with 0.03 in. (0.76 mm) above the 4.69-in. (119.13-mm) normal; and February, with 0.08 in. (2.03 mm) above the 4.74-in. (120.40-mm) normal. The deficit for the year was 18.08 in. (461.77 mm). Cumulative deficit from May 1984 through September 1986, was 28.07 inches (712.98 mm).

The maximum day was February 17, with 1.76 in. (44.61 mm); the maximum week was May 22-29, with 3.18 in. (80.77 mm); and the maximum month was August, with 4.87 in. (123.79 mm).

2.2 WATER YEAR 1987

This year, five months recorded above-normal precipitation, but the deficit in the remaining seven months was so much greater than the excess that the drought continued. Above-normal months were October (+2.04 in., or 51.74 mm); November (+0.18 in., or 4.69 mm); February (+0.81 in., or 20.57 mm); May (+0.03 in., or 0.85 mm); and September, (+0.30 in., 7.60 mm). Deficit for the year was 7.92 in. (201.10 mm), and cumulative deficit since May 1984 was 35.98 in. (913.98 mm).

The maximum day was January 18, with 2.14 in. (54.35 mm); the maximum week was December 7-13, with 3.67 in. (93.20 mm); and the maximum month was December, with 5.26 in. (133.62 mm).

2.3 OCTOBER 1987 THROUGH MARCH 1988

Only one month, January, recorded above-normal precipitation, but the excess was insignificant [0.06 in. (1.55 mm)]. Consequently, the drought becomes increasingly severe. Deficit for the period was 11.72 in. (297.77 mm), and cumulative deficit since May of 1984 was 47.71 in. (1211.75 mm).

The maximum day was January 19, with 2.95 in. (74.97 mm); the maximum week was January 16-23, with 3.64 in. (92.46 mm); and the maximum month was January, with 5.33 in. (135.41 mm).

3. RECORD EVALUATION

The stage record for each site was examined for errors resulting from equipment malfunction or temporary changes in hydraulic conditions, such as debris buildup in the control structure. This examination relies upon comparison with flow at nearby sites, weather conditions, and the professional judgement of the hydrologist in charge, who made on-site inspections at each site once a week during the entire period. These weekly visits were invaluable, especially during low-flow periods at CWDF 1 and during the leaf buildup periods at CWDF 3 and CWDF 4.

Because the stage-discharge relationship, or rating curve, at all sites is considered reliable, discharge figures for all periods of valid stage record are considered "good," meaning that 95% of the daily discharge figures are within 10% of the true value. In all cases where the stage record appeared to be invalid, estimates of daily discharge have been reported and noted. In some instances, the estimated value is considered to be of comparable quality to the "valid" record, but for the most part, the estimated days are probably no better than "fair," meaning that 95% of the daily discharge figures are within 15% of the true value. Because of the weekly inspections, the only records considered "poor" (i.e., less than "fair" accuracy) are the relatively few instances when the flow exceeded the flume capacity at CWDF 4, or the extremely erratic stage record at CWDF 3. Of the 4565 station days of record covered by this report, 84% are considered good and 16% are considered fair. Only 15 days, or about 0.3%, are considered poor. Individual site records are discussed in the following paragraphs.

CWDF 1

Eighty-nine percent of the daily discharge values are good, and 11% are fair. Nearly all of the fair record was the result of faulty intake operation during periods when the stage was less than 0.26 ft (discharge less than 1.06 L/s, or 0.037 cfs). For some as yet unknown reason, the water level in the stilling-well does not drop below 0.26 ft, even though the bottom of the intake is at about 0.00 ft, which is also the minimum elevation of the flume throat, and the bottom of the stilling-well is at gage height (0.70 ft). Plans are under way to dig out the intake to identify and correct the problem. During the period covered by this report, major periods of low water were July and August of 1986 and August and September of 1987.

CWDF 3

Eighty-four percent of the daily discharge values are good, 15% are fair, and 1% are poor. The fair record was the result of erratic behavior of the electronic instrumentation which occurred at

unpredictable intervals throughout the period of record, or a combination of instrument problems and leaf buildup in the flume during the fall months. In February and March of 1988, modifications were made to the flume to allow installation of a stilling-well and a float-operated stage recorder, which has proven to be a more reliable instrument for field installation. Major periods of fair record are October 1986 and July, August, and September of 1987. The poor record occurred during a wet period in February 1986 and was the result of extremely erratic behavior of the instrumentation.

CWDF 4

Seventy-four percent of the daily discharge values are good, 25% are fair, and 1% poor. The fair record was the result of erratic behavior of the electronic instrumentation and of two 1-week periods when the instrument was completely out of service for repair. As was the case at CWDF 3, the erratic behavior occurred at unpredictable intervals. Also, as at CWDF 3, the instrumentation was replaced with a stilling-well and a float-operated recorder. Major periods of fair record were August and September of 1986 and July, August, September, November, and December of 1987. Poor record was obtained February 17-19, 1986; December 9-11, 1986; January 19-21, 1987; and February 28 to March 1, 1987, when flow exceeded the flume capacity.

CWDF 7

Eighty-one percent of the daily discharge values are good, and 19% are fair. The fair record was the result of instrumentation problems, as explained in remarks for sites CWDF 3 and CWDF 4. At this site, however, the problem was with the ultrasonic transducer used to measure water level rather than with the recording instrument. Replacement of the transducer relieved some of the problems, but the recording instrument was still unpredictable enough to make replacement with a float-operated instrument necessary. Major periods of fair record were October 1985; October and November of 1986; and August, September, and November of 1987.

CWDF 8

Ninety-two percent of the daily discharge values are good, and 8% are fair, considering the entire period of the report. However, the good record includes 382 days when the stream was dry. The dry periods were June 16, 1986, to October 25, 1986; October 29, 1986, to November 4, 1986; and June 10, 1987, to January 16, 1988. If these periods are excluded from the evaluation, 85% of the record is good and 15% fair. Fair record was October 1985 and November 1986, the result of erratic behavior of the instruments and/or leaves blocking the flume throat. Despite the fact that the instrumentation at this site performed appreciably better than sites 3, 4, and 7, these instruments were also replaced with float-operated instruments in March 1988, to be consistent with the other sites on the project and thus facilitate records processing.

4. RUNOFF VERSUS PRECIPITATION

Tables 1 through 3 present precipitation and runoff data by month and water year. Runoff data have been converted to millimeters from the basin area so that a direct ratio to precipitation in millimeters on the basin can be made.

These data provide some evidence of possible groundwater loss from the basins. Groundwater loss is important if West Chestnut Ridge is selected as a site for waste disposal. Groundwater loss is associated with subsurface flow paths that could transport contaminants away from the watershed. The basins are ranked in Table 4 according to precipitation loss (precipitation - runoff) with the basin above gaging station 8 having the greatest loss and that above station 7 having the least. Evapotranspiration (ET) is the largest component of the precipitation loss, and ET at the watershed scale in humid climates is mostly a function of climatic variables (solar radiation, temperature, humidity and windspeed); consequently, annual ET is usually considered to be uniform for a region. If ET is assumed to be uniform and if the annual change in storage is assumed to be negligible, then the basin in

Table 4. Annual precipitation loss for West Chestnut Ridge basins

Water year	Station	Precipitation loss (mm)	Fraction of precipitation
1986	8	783.8	0.84
	4	762.6	0.82
	3	739.9	0.80
	1	714.3	0.77
	7	636.8	0.68
1987	8	1016.0	0.86
	4	952.1	0.80
	3	900.9	0.76
	1	876.4	0.74
	7	830.6	0.70

throughout the year from a groundwater spring. The net groundwater component for this basin may be positive. An independent estimate of ET is needed to calculate the actual net groundwater loss.

EXTERNAL DISTRIBUTION

73.	V. Dean Adams, Tennessee Technological University, Cookeville, TN 38501
74.	Zelda Bailey, USGA-wrd, 413 Federal Bldg, U.S. Courthouse, Nashville, TN 37203
75.	R. P. Berube, Deputy Assistant Secretary for Environment, EH-20, U.S. Department of Energy, Washington, DC 20585
76.	R. E. Blake, P.O. Box 628, MS 1235, Piketon, OH 45661
77.	C. M. Borgstrom, Director, Office of NEPA Project Assistance, EH-25, U.S. Department of Energy, Washington, DC 20585
78.	J. S. Brehm, Office of Surplus Facilities Management, UNC Nuclear Industries, P.O. Box 490, Richland, WA 99352
79.	J. Thomas Callahan, Associate Program Director, Ecosystem Studies Program, Room 336, 1800 G Street, NW, National Science Foundation, Washington, DC 20550
80.	T. C. Chee, R&D and Byproducts Division, DP-123 (GTN), U.S. Department of Energy, Washington, DC 20545
81.	R. R. Colwell, Director, Maryland Biotechnology Institute, Microbiology Building, University of Maryland, College Park, MD 20742
82.	E. F. Conti, Office of Nuclear Regulatory Research, Nuclear Regulatory Commission, MS-1130-SS, Washington, DC 20555

83. W. E. Cooper, Department of Zoology, College of Natural Sciences, Michigan State University, East Lansing, MI 48824
84. N. H. Cutshall, 10461 White Granite Dr., Suite 204, Oakton, VA 22124
85. J. E. Dieckhoner, Acting Director, Operations and Traffic Division, DP-122 (GTN), U.S. Department of Energy, Washington, DC 20545
86. J. Farley, Office of Energy Research, U.S. Department of Energy, ER-65, Washington, DC 20545
87. G. J. Foley, Director, Environmental Monitoring Systems Laboratory, MD-75, Research Triangle Park, NC 27711
88. C. R. Goldman, Professor of Limnology, Director of Tahoe Research Group, Division of Environmental Studies, University of California, Davis, CA 95616
89. J. W. Huckabee, Program Manager, Ecological Studies Group, Electric Power Research Institute, 3412 Hillview Avenue, P.O. Box 10412, Palo Alto, CA 94303
90. E. A. Jordan, Office of Defense Programs, U.S. Department of Energy, DP-122, Washington, DC 20545
91. George Y. Jordy, Director, Office of Program Analysis, Office of Energy Research, ER-30, G-226, U.S. Department of Energy, Washington, DC 20545
92. R. J. Keeling, C100, Room 227, Martin Marietta Energy Systems, Inc., Paducah Gaseous Diffusion Plant, P.O. Box 1410, Paducah, KY 42001
93. D. B. Leclaire, Director, Office of Defense Waste and Transportation Management, DP-12 (GTN), U.S. Department of Energy, Washington, DC 20545
94. S. M. Leone, C710, Room 227, Martin Marietta Energy Systems, Inc., Paducah Gaseous Diffusion Plant, P.O. Box 1410, Paducah, KY 42001
95. J. Lewis, U.S. Geological Survey--Water Resources Division, 1013 N. Broadway, Knoxville, TN 37917
96. G. E. Likens, Director, The New York Botanical Garden, Institute of Ecosystem Studies, The Mary Flagler Cary Arboretum, Box AB, Millbrook, NY 12545
97. R. D. Livesay, U.S. Geological Survey--Water Resources Division, 1013 N. Broadway, Knoxville, TN 37917
98. C. J. Mankin, Director, Oklahoma Geological Survey, The University of Oklahoma, 830 Van Vleet Oval, Room 163, Norman, OK 73019
99. Helen McCammon, Director, Ecological Research Division, Office of Health and Environmental Research, Office of Energy Research, ER-75, U.S. Department of Energy, Washington, DC 20545
100. C. E. Miller, Surplus Facilities Management Program Office, U.S. Department of Energy, Richland Operations, P.O. Box 550, Richland, WA 99352
101. W. E. Murphie, Office of Remedial Action and Waste Technology, U.S. Department of Energy, NE-23, Washington, DC 20545

102. Edward O'Donnell, Division of Radiation Programs and Earth Sciences, U.S. Nuclear Regulatory Commission, Mail Stop 1130 SS, Washington, DC 20555
103. Gregory Reed, Department of Civil Engineering, The University of Tennessee, Knoxville, TN 37916
104. Ilkka Savolainen, Waste Management Section, International Atomic Energy Agency, Wagramerstrasse 5, P.O. Box 100, A-1400 Vienna, Austria
105. S. L. Shell, C100, Martin Marietta Energy Systems, Inc., Paducah Gaseous Diffusion Plant, P.O. Box 1410, Paducah, KY 42001
106. D. K. Solomon, 103 Seagram Dr. #326 Waterloo Ontario, Canada N2L3B8
107. R. J. Starmer, HLW Technical Development Branch, Office of Nuclear Material Safety and Safeguards, Nuclear Regulatory Commission, Room 427-SS, Washington, DC 20555
108. M. T. Stewart, University of South Florida, Tampa, FL 33620
109. G. Timmons, P.O. Box 628, MS 1235, Piketon, OH 45661
110. S. B. Upchurch, University of South Florida, Tampa, FL 33620
111. Ken Walker, Department of Geology, The University of Tennessee, Knoxville, TN 37916
112. Frank J. Wobber, Ecological Research Division, Office of Health and Environmental Research, Office of Energy Research, ER-75, U.S. Department of Energy, Washington, DC 20545
113. J. G. Yates, Office of Energy Research, U.S. Department of Energy, ER-42, Washington, DC 20585
114. H. H. Zehner, U.S. Geological Survey-Water Resources Division, 1013 N. Broadway, Knoxville, TN 37917
