ABSTRACT

A compilation of technical computer codes related to ongoing work under the cognizance of the U.S. Department of Energy's Office of Civilian Radioactive Waste Management (DOE/OCRWM) is presented. Much of the information was obtained from responses to a questionnaire distributed by DOE/OCRWM to all DOE offices associated with the radioactive waste management program.

The codes are arranged alphabetically by name. In addition to the code description, each sheet includes other data such as computer hardware and software requirements, document references, name of respondent, and code variants. The codes are categorized into seventeen subject areas plus a miscellaneous category. Some of the subject areas covered are atmospheric dispersion, biosphere transport, geochemistry, nuclear radiation transport, nuclide inventory, and risk assessment. Three appendixes are included which list the names of the contributors, a list of the literature reviewed, and a glossary of computer code terminology and definitions.

1. INTRODUCTION

The Department of Energy's Office of Civilian Radioactive Waste Management (DOE/OCRWM), through its many contractors, has utilized computer models and software programs to perform facility designs, environmental assessments, and licensing activities. Because of the disparate nature of the programs it supports and the dispersed locations of the participants in the overall system, DOE/OCRWM realized that a concerted effort was needed to ensure the transferability and thus avoid the duplication of supportive software in the case where the same capabilities are needed by multiple components (monitored retrieval storage, repository, transportation, etc.) of the waste management system for licensing and design. To satisfy ongoing quality assurance (QA) programs and future licensing activities, DOE/OCRWM expects contractors to reach nearly identical conclusions when using predictive computer codes for similar modeling problems. Similarly, compatibility between input and output of the various models, developed or under development, is desirable to assure that results from one area of the waste system could be used as input into the models of other areas of the program.

To respond to the need for timely and comprehensive technical computer code software and information transfer among contractors, DOE/OCRWM asked the Oak Ridge National Laboratory (ORNL) to prepare a comprehensive compendium of technical computer codes (those codes with an engineering or physical basis). The purposes of such a compendium are to provide DOE/OCRWM projects with information on the current availability of codes and to furnish them with guidance on the codes and their applications to current projects. Science Applications International Corporation (SAIC), under contract to Martin Marietta Energy Systems (Energy Systems), has had the primary responsibility for developing the compilation of codes, based on the information received from DOE/OCRWM's contractors.

In contrast to existing computer code compendia, the code information provided in this document was obtained exclusively from

participants in DOE/OCRWM projects as of July, 1987. A questionnaire (developed by Energy Systems and DOE/OCRWM via the Technical Code Coordinating Group [TCCG]) was distributed by DOE/OCRWM via their project offices to code users. The users were requested to complete the questionnaires and return them for compilation.

Over 300 questionnaires were received and entered as described. A listing of the persons and organizations contributing completed questionnaires is provided in Appendix A. The draft document, issued for comment in July, 1987, has been extensively reorganized, and many codes were reclassified or eliminated. The codes are now listed in alphabetical order by name rather than by code type.

In addition to the codes identified by the questionnaire data base, a supplementary list of codes was developed from a literature search of existing computer code compendia. The compendia reviewed are listed in Appendix B. From the historical compendia, over 1000 codes were identified for the data base. Less than 100 of the 266 codes identified by the questionnaire appear in the historical data base.

Descriptions and other relevant information provided on the questionnaires for each code are listed in Sect. 3 of this report. Each code has been identified as fitting primarily into one (or more) of 17 categories, or "Miscellaneous".

2. COMPENDIUM OF TECHNICAL COMPUTER CODES

As the over 300 questionnaires were received, preliminary reviews of the information were conducted from both editorial and technical standpoints. In general, the information in the data base was provided by the questionnaire respondents; however, supplementary information has been incorporated into the code data as appropriate. The code descriptions were supplemented in cases where the code descriptions were very brief and supplementary descriptions were available. Guides to the use of the printed computer code information sheets of Sect. 3 are provided in Sect. 2.1.

This compendium of computer codes is based on the completed questionnaires received during the period January through June 1987. As discussed in Sect. 2.2, it is recognized that it will be necessary to add and update information as it becomes available, especially due to the large changes in DOE/OCRWM from the NWPAA of 1987. It is requested that users of this compendium provide corrections and/or new information known to them.

2.1 USE OF THIS DOCUMENT

Information sheets have been prepared for each of the 266 code records in the data base. These information sheets are provided in Sect. 3 in alphabetical order by code name. The code categories are listed and described in Table 1.

An alphabetical listing of the 266 codes and the code types listed for each is shown in Table 2. A cross listing of the codes in each code type is shown in Table 3. Tables 1 through 3 are found at the end of Sect. 2.

A comparison of the computer codes identified from questionnaires and a corresponding list of codes identified from the literature search indicates that relatively few codes (<100) are common to both lists. Thus, about one-third of the codes listed in the questionnaires were identified in the historical information and less than one-tenth of the

codes in the historical list were described in the questionnaires. This could indicate either a high obsolescence rate of code usage within the DOE/OCRWM programs or that a significant number of codes were not identified or documented.

The information sheets provided in Sect. 3 list: Code Name, Variants, Code Type, Description, Computers, Interfaces, External Files, Acquisition, Respondent(s), References, and Comments. Information found in these various categories is described below.

Code Name:	Basic code name.
Variants:	Variations of the code name as listed by the user.
Code Type:	A list of code categories in the order of primary, secondary, etc.
Description:	A description of the code provided by the user or expanded to incorporate additional information available.
Comments:	Other information or observations.
Computer:	The type(s) of computer which can be used to run the code.
Interfaces:	Separate computer codes that can be used to generate input data for the referenced code (preprocessor) or used to process the output of the referenced code (postprocessor).
External Files:	External data files used as input data to run the referenced code.
Acquisition:	The availability or restriction on availability of the code as indicated by the user.
Respondent(s):	The person submitting the questionnaire.
Reference:	Documentation for the code (if available).

2.2 REQUEST FOR NEW INFORMATION AND CORRECTIONS

As discussed above, this compendium of technical computer codes was developed based on code questionnaires received from users over the period from January to June 1987. Comparing the code questionnaires to a listing compiled from the literature indicates that code usage has been changing. Thus, it is expected that the compendium will require periodic revisions to properly reflect code usage.

In addition to specifically requested code information via the DOE program offices, users of this document are requested to supply additions, corrections or updates to this document, in writing, to:

Oak Ridge National Laboratory
Waste Systems Data and Development Program
Bldg. 4500-N, MS 6233
P.O. Box 2008
Oak Ridge, TN 37831-6233

Table 1. Glossary of technical computer code types

Code type	Definition
Air dispersion	Codes used to calculate the concentrations of materials released into the atmosphere from one or more sources and transported due to atmospheric diffusion and air movement (e.g., wind buoyancy).
Biosphere transport	Codes used to analyze the transport of nuclides in the biosphere excluding atmospheric transport (including plant, animal, and surface water pathways to man). Also, codes are included that analyze surface hydrology.
Dose-to-man	Codes used to analyze the effect (dose) on an individual (or a population of individuals) from ingested/inhaled radionuclides, externally absorbed radiation, or subatomic particles. Doses are typically evaluated in terms of "rem" units for individuals or "person-rem" units for populations. These doses are related to health effects.
Geochemistry	Codes used to analyze the chemical reactions, bonding, and associated geochemical conditions which occur between nuclides and the surrounding rock, soils, and ground-water.
Geosphere transport	Codes used to analyze the transport of nuclides from the emplaced waste form to groundwater or to the surface. Also, codes used to analyze nuclide transport through subsurface rock media via groundwater (or other fluids). Includes codes for general groundwater hydrology.
HVAC	Codes used to analyze heating, ventilating, and air conditioning systems or related parameters.
Mapping	Codes used to analyze and plot survey data and topographical information. Includes codes used for coordinate transformations.
Mechanical stress	Codes used to analyze the effects of forces on structures in terms of the resulting stress/strain distributions.

Table 1. (continued)

Code type	Definition
Nuclear radiation transport	Codes used to analyze the transport of subatomic particles or radiation through materials. Includes codes used to analyze the potential for a composite mass of radioactive and nonradioactive elements to achieve a self-sustaining nuclear reaction (criticality). Also, codes are included that are used in processing cross sections and associated numerical factors.
Nuclide inventory	Codes used to estimate the changing isotopic composition of a mass of nuclear fuel or structural component materials due to isotopic generation, depletion, and radioactive decay.
Operations/Logistics	Codes used to analyze the movement of personnel, equipment, and materials (including wastes) and their effects on operations. Includes codes to analyze the effects and interrelationships among multiple actions accomplishing a defined objective or task.
Risk assessment	Codes used to analyze the reliability or availability of systems, subsystems, or components. (Note: "Risk" is the expectation of consequence computed as the product of a failure probability and the consequences of that failure.)
Rock mechanics	Codes used to analyze the mechanical effects of geologic forces on the rock units surrounding a geologic repository and the response of these rock units to the forces.
System modeling	Codes used to analyze the overall performance of a system in terms of logical combinations of the performance of subsystems or components. These include several categories of codes used to assess the capability of a geologic repository to isolate emplaced wastes. The codes listed in the other categories in this table could be each used as a "system modeling" or "performance assessment" tool.

Table 1. (continued)

Code type	Definition
Thermal	Codes used to analyze the heat transport in materials and the resulting temperature distributions.
Total system life cycle cost	Codes used to analyze costs associated with design, construction, operation, and decommissioning of a facility. Included in this category are codes associated with economics, resource allocation, and management.
Transportation	Codes used to analyze the movement of materials (including wastes) and its effects on operations or public health and safety.
Miscellaneous	Codes which have been identified but are not judged to be a member of the categories listed above.

3. DESCRIPTIONS OF TECHNICAL COMPUTER CODES

This section contains the listing of 266 computer code, alphabetically by code name, resulting from over 300 questionnaires received from the many contributors at the DOE field offices and their contractors. About 100 of the codes listed in this section were also listed in one of the many previous compilations of computer codes shown in Appendix B. This indicates that the majority of technical computer codes currently in use by the OCRWM program have only recently been developed, perhaps to analyze unique performance requirements of a civilian radioactive waste repository.

CODE NAME: ACT-ARA

VARIANTS: NONE

CODE TYPE: NUCLIDE INVENTORY

DESCRIPTION: PROGRAM FOR CALCULATION OF PROBABILISTIC CUMULATIVE RELEASE TO SUPPORT 40CFR191 POSTCLOSURE RELEASE CALCULATIONS AND ALSO SOURCE TERM AS A FUNCTION OF TIME.

COMMENTS: NONE

COMPUTER(S): VAX

INTERFACES: NONE

EXTERNAL FILES: NONE

ACQUISITION: YES, NONPROPRIETARY

RESPONDENT(S): S. WOOLFOLK
SAIC
FTS 575-1875

REFERENCE: S. W. WOOLFOLK, "ACT: A PROGRAM FOR CALCULATION OF THE CHANGES IN RADIOLOGICAL SOURCE TERMS WITH TIME," WIPP/DOE-85-201 (ARA/TSD 5006-0006) (AUGUST 1985).

CODE NAME: ADINA

VARIANTS: ADINA/BM

CODE TYPE: MECHANICAL STRESS
ROCK MECHANICS
THERMAL

DESCRIPTION: ADINA IS A GENERAL PURPOSE FINITE ELEMENT PROGRAM FOR THE ANALYSIS OF STRUCTURAL MECHANICS PROBLEMS. IT HAS EXTENSIVE CAPABILITIES TO ANALYZE LINEAR AND NONLINEAR, STATIC AND DYNAMIC THREE DIMENSIONAL BEHAVIOR. THE ASSOCIATED PROGRAM ADINAT SOLVES HEAT TRANSFER AND ANALOGOUS FIELD PROBLEMS. NON-LINEARITIES MAY BE DUE TO LARGE DISPLACEMENTS, NON-LINEAR MATERIAL AND VARIABLE BOUNDARY CONDITIONS. OF SPECIAL RELEVANCE TO THE PRESENT STUDY ARE THE MATERIAL MODELS FOR THERMO-ELASTO-PLASTIC CREEP BEHAVIOR, CONCRETE/ROCK BEHAVIOR AND THE ELEMENT BIRTH AND DEATH OPTION.

COMMENTS: NONE

COMPUTER(S): VAX, PRIME

INTERFACES: NONE

EXTERNAL FILES: NONE

REFERENCE: UNKNOWN

CODE NAME: AIRDOS-EPA

VARIANTS: AIRDOS-EPA 1.00

CODE TYPE: AIR DISPERSION
BIOSPHERE TRANSPORT
DOSE-TO-MAN

DESCRIPTION: A MODIFIED GAUSSIAN PLUME EQUATION IS USED TO ESTIMATE BOTH HORIZONTAL AND VERTICAL DISPERSION OF AS MANY AS 36 RADIONUCLIDES RELEASED FROM ONE TO SIX STACKS OR AREA SOURCES. RADIONUCLIDE CONCENTRATIONS IN MEAT, MILK, AND FRESH PRODUCE CONSUMED BY HUMANS ARE ESTIMATED BY COUPLING THE OUTPUT OF THE ATMOSPHERIC TRANSPORT MODELS WITH THE U.S. NRC, REGULATORY GUIDE 1.109 TERRESTRIAL FOOD CHAIN MODELS. DOSE CONVERSION FACTORS ARE INPUT TO THE CODE, AND DOSES TO MAN AT EACH DISTANCE AND DIRECTION SPECIFIED ARE ESTIMATED FOR TOTAL BODY, RED MARROW, LUNGS, ENDOSTEAL CELLS, STOMACH WALL, LLI WALL, THYROID, LIVER, KIDNEYS, TESTES, AND OVARIES THROUGH THE FOLLOWING EXPOSURE MODES: (1) IMMERSION IN AIR CONTAINING RADIONUCLIDES; (2) EXPOSURE TO GROUND SURFACES CONTAMINATED BY DEPOSITED RADIONUCLIDES; (3) IMMERSION IN CONTAMINATED WATER; (4) INHALATION OF RADIONUCLIDES IN AIR; AND (5) INGESTION OF FOOD PRODUCED IN THE AREA. THE CODE MAY BE RUN TO ESTIMATE HIGHEST ANNUAL INDIVIDUAL DOSE IN THE AREA OR ANNUAL POPULATION DOSE. GROUND CONCENTRATIONS OF RADIONUCLIDES AND INTAKE RATES BY MAN ARE TABULATED FOR EACH ENVIRONMENTAL LOCATION. EXPOSURES ARE ALSO CALCULATED AND TABULATED FOR INHALATION OF 222 RN SHORT-LIVED PROGENY.

COMMENTS: NONE

COMPUTER(S): CDC, IBM-PC, VAX

INTERFACES: PRE/POST-PROCESSOR - STAR, RADRISK /DARTAB, RADRISK

EXTERNAL FILES: NONE

ACQUISITION: NONE

RESPONDENT(S): MARK D. OTIS, EG&G IDAHO, INC. (208) 526-0603
J.J. MAYBERRY, ONWI, (614) 424-7753
S. WOOLFOLK, SAIC, FTS-575-1875

CODE NAME: ANISN

VARIANTS: NONE

CODE TYPE: NUCLEAR RADIATION TRANSPORT

DESCRIPTION: CALCULATES NEUTRON AND GAMMA TRANSPORT, INCLUDING ONE-DIMENSIONAL ANISOTROPIC SCATTERING. SOLVES THE ONE-DIMENSIONAL BOLTZMANN TRANSPORT EQUATION FOR NEUTRONS OR GAMMA RAYS IN SLAB, SPHERE, OR CYLINDER GEOMETRY. THE SOURCE MAY BE FIXED, FISSION, OR A SUBCRITICAL COMBINATION OF THE TWO. CRITICALITY SEARCH MAY BE PERFORMED ON ANY ONE OF SEVERAL PARAMETERS. CROSS SECTIONS MAY BE WEIGHTED SPECTRA OR CALCULATED IN DETAIL. ANISN ALSO INCLUDES A TECHNIQUE FOR SOLVING THE TRANSPORT EQUATION. THE SOLUTION TECHNIQUE IS AN ADVANCED DISCRETE ORDINATES METHOD. ANISN WAS DESIGNED TO SOLVE DEEP-PENETRATION PROBLEMS IN WHICH ANGLE-DEPENDENT SPECTRA ARE CALCULATED IN DETAIL. THE PRINCIPAL FEATURE MAKING ANISN SUITABLE FOR SUCH PROBLEMS IS A PROGRAMMING TECHNIQUE WITH OPTIONAL DATA STORAGE CONFIGURATIONS ALLOWING EXECUTION OF SMALL, INTERMEDIATE, AND EXTREMELY LARGE PROBLEMS. ANISN ALSO INCLUDES A TECHNIQUE FOR HANDLING GENERAL ANISOTROPIC SCATTERINGS, POINTWISE CONVERGENCE CRITERIA, AND ALTERNATIVE STEP FUNCTION DIFFERENCE EQUATIONS THAT EFFECTIVELY REMOVE THE OSCILLATING FLUX DISTRIBUTIONS SOMETIMES FOUND IN DISCRETE ORDINATES SOLUTION.

CODE NAME: ANSYS

VARIANTS: NONE

CODE TYPE: ROCK MECHANICS
MECHANICAL STRESS
THERMAL

DESCRIPTION: THE ANSYS COMPUTER CODE IS A GENERALIZED STRESS ANALYSIS CODE WIDELY USED IN THE NUCLEAR INDUSTRY. THIS PROPRIETARY COMPUTER CODE, DEVELOPED BY SWANSON ANALYSIS SYSTEMS, HAS A BROAD CAPABILITY TO ANALYZE THE THERMOMECHANICAL RESPONSE OF ROCKS. SOME OF THE UNIQUE CAPABILITIES OF THIS CODE ARE: THE ABILITY OF MODEL A CONTINUOUS JOINTED ROCK MASS; CAN BE USED TO ANALYZE STRESSES AND STRAINS IN TWO OR THREE DIMENSIONS; CAN SIMULATE COUPLED HEAT AND STRESS TRANSIENTS; CAN CONSIDER LINEAR AND NON-LINEAR ROCK PROPERTIES; HAS A 3D ANISOTROPIC SOLID ELEMENT THAT ALLOWS A FULL 6 X 6 TEMPERATURE DEPENDENT ANISOTROPIC STRESS-STRAIN MATRIX; AND HAS A 3D SOLID CONCRETE ELEMENT (ALSO USED FOR ROCK) THAT HAS CRACKING AND CRUSHING CAPABILITY. THE COMPUTER CODE IS VERY WELL DOCUMENTED WITH REGARD TO INPUT INSTRUCTIONS AND USE.

CODE NAME: BMINES

VARIANTS: NONE

CODE TYPE: MECHANICAL STRESS
ROCK MECHANICS

DESCRIPTION: BMINES (BUMINES) CONSIDERS STATIC, LINEAR, AND NONLINEAR MATERIAL PROPERTIES IN TWO- OR THREE-DIMENSIONAL REPRESENTATIONS WITH APPLIED EXTERNAL FORCES AND PRESSURES, DISPLACEMENTS, AND GRAVITY LOADING. IN ADDITION, SEQUENCE OF CONSTRUCTION (I.E., ADDITION OR REMOVAL OF ELEMENTS) CAN BE CONSIDERED. MODELING OF SLIP SURFACES (FAULTS) IS POSSIBLE. BOTH STRUCTURAL AND CONTINUUM ELEMENTS ARE AVAILABLE. THE CODE HAS SOPHISTICATED MESH GENERATION CAPABILITY FOR EASE OF MESH DESCRIPTION, IS QUITE EFFICIENT, IS RESTARTABLE FROM TAPE, AND IS USER-ORIENTED. A FINITE-ELEMENT METHOD IS USED. INPUTS ARE BASIC STRUCTURAL CONFIGURATIONS, LOADS, MATERIAL DEFINITIONS, AND A SEQUENCE OF ELEMENT REMOVAL AND INSERTION. OUTPUT INCLUDES DISPLACEMENT, STRESSES, AND STRAINS. MESH PLOTS ARE ALSO AVAILABLE.

CODE NAME: CFEST

VARIANTS: FE3DGW, CFEST 1.0, CFEST 1.1

CODE TYPE: GEOSPHERE TRANSPORT
THERMAL

DESCRIPTION: CFEST (COUPLED FLUID ENERGY AND SOLUTE TRANSPORT) PROVIDES A FINITE ELEMENT ANALYSIS OF NON-ISOTHERMAL EVENTS IN A CONFINED AQUIFER SYSTEM. SINGLE-PHASE, DARCIAN FLOWS ARE CONSIDERED IN THIS MULTI-DIMENSIONAL ANALYSIS PACKAGE. IN A CARTESIAN CO-ORDINATE SYSTEM THE CODE CAN SIMULATE FLOW AND TRANSPORT IN A HORIZONTAL PLANE, A VERTICAL PLANE, OR IN A FULLY THREE-DIMENSIONAL REGION. AN OPTION ALSO EXISTS FOR THE AXISYMMETRIC ANALYSIS OF A VERTICAL CROSS SECTION. THE PACKAGE INCLUDES SUPPORTIVE PROGRAMS FOR INTERACTIVE INPUT PREPARATION, GRAPHICAL DISPLAY OF INPUT PARAMETERS, AND PLOTTING THE RESULTS. THE CODE IS AN EXTENSION OF FE3DGW TO SIMULATE COUPLED FLOW AND ENERGY, AND SOLUTE TRANSPORT.

COMMENTS: NONE

REFERENCE: UNKNOWN

CODE NAME: CHAINT

VARIANTS: CHAINT 2.3, CHAINT-MC 3.1, CHAINT-MCI-1.00

CODE TYPE: GEOSPHERE TRANSPORT

DESCRIPTION: THE CHAINT CODE SIMULATES MULTICOMPONENT RADIONUCLIDE TRANSPORT IN A FRACTURED-POROUS MEDIUM. THE PROCESSES MODELLED INCLUDE ADVECTION, DISPERSION/DIFFUSION, SORPTION, CHAIN-DECAY COUPLING, AND MASS RELEASE. THE COMPUTATIONAL METHOD IS BASED ON A FINITE-ELEMENT SOLUTION OF THE SYSTEM OF EQUATIONS. CONTINUUM PORTIONS OF THE MEDIUM ARE MODELLED AS A SINGLE-POROSITY SYSTEM USING TWO DIMENSIONAL ISOPARAMETRIC ELEMENTS. DISCRETE FRACTURES ARE MODELLED USING ISOPARAMETRIC LINE ELEMENTS THAT ARE EMBEDDED ALONG THE SIDES OF THE TWO-DIMENSIONAL ELEMENTS. PRINCIPAL INPUT TO THE CODE IS THE GROUND-WATER FLOW CALCULATION OBTAINED WITH THE MAGNUM2D CODE (OR A COMPARABLE NON-ISOTHERMAL FLOW MODEL). THE CHAINT CODE IS GENERALIZED TO HANDLE ANY COMBINATION OF NUCLIDES (ACTINIDES, FISSION, OR ACTIVATION PRODUCTS) WITH DIFFERENT HALF-LIVES; ACCOMMODATES SUBZONE CALCULATIONS IN WHICH THE REGION OF ACTIVE NODES, WITHIN THE FINITE ELEMENT MESH, IS VARIED WITH TIME AS THE PROBLEM PROGRESSES; AND IS SECOND ORDER ACCURATE AND FULLY IMPLICIT.

CODE NAME: DOT

VARIANTS: NONE

CODE TYPE: THERMAL
SYSTEM MODELING
ROCK MECHANICS

DESCRIPTION: DOT IS A GENERAL PURPOSE FINITE ELEMENT HEAT CONDUCTION CODE DESIGNED FOR BOTH LINEAR AND NONLINEAR STEADY-STATE AND TRANSIENT ANALYSIS. THE PROGRAM SOLVES THE GENERAL PARTIAL DIFFERENTIAL EQUATION WHICH GOVERNS TRANSIENT HEAT TRANSPORT IN A TWO-DIMENSIONAL ANISOTROPIC AND HETEROGENEOUS MATERIAL. CAPABILITIES ARE PROVIDED FOR MODELLING MATERIALS WITH TEMPERATURE-DEPENDENT THERMAL PROPERTIES AND TIME-DEPENDENT TEMPERATURE, HEAT FLUX, CONVECTION AND RADIATION BOUNDARY CONDITIONS, TOGETHER WITH TIME-DEPENDENT INTERNAL HEAT GENERATION. BOTH PLANAR AND AXISYMMETRIC GEOMETRIES ARE AVAILABLE. STRENGTHS OF THE CODE INCLUDE ITS FLEXIBILITY, WIDE RANGE OF POSSIBLE BOUNDARY CONDITIONS, NONLINEAR MATERIAL PROPERTIES, AND ITS EFFICIENT EQUATION SOLUTION ALGORITHM. LIMITATIONS INCLUDE THE LACK OF A THREE-DIMENSIONAL ANALYSIS CAPABILITY, NO RADIATIVE OR CONVECTIVE INTERNAL HEAT TRANSFER, AND THE NEED TO MAINTAIN A CONSTANT TIME STEP IN EACH PROGRAM EXECUTION.

CODE NAME: DOT- IV

VARIANTS: NONE

CODE TYPE: NUCLEAR RADIATION TRANSPORT

DESCRIPTION: DOT-IV SOLVES THE BOLTZMANN TRANSPORT EQUATION IN TWO-DIMENSIONAL GEOMETRIES. PRINCIPAL APPLICATIONS ARE TO NEUTRON AND/OR PHOTON TRANSPORT, ALTHOUGH THE CODE CAN BE APPLIED TO TRANSPORT PROBLEMS FOR ANY PARTICLES NOT SUBJECT TO EXTERNAL FORCE FIELDS. BOTH HOMOGENEOUS AND EXTERNAL- SOURCE PROBLEMS CAN BE SOLVED. SEARCHES ON MULTIPLICATION FACTOR, TIME ABSORPTION, NUCLIDE CONCENTRATION, AND ZONE THICKNESS ARE AVAILABLE FOR REACTOR PROBLEMS. NUMEROUS EDITS AND OUTPUT DATA SETS FOR SUBSEQUENT USE ARE AVAILABLE. DOT-IV USES THE METHOD OF DISCRETE ORDINATES. BALANCE EQUATIONS ARE SOLVED FOR THE DENSITY OF PARTICLES MOVING ALONG DISCRETE DIRECTIONS IN EACH CELL OF A TWO- DIMENSIONAL SPATIAL MESH. ANISOTROPIC SCATTERING IS TREATED USING A LEGENDRE EXPANSION OF ARBITRARY ORDER. CONVERGENCE CAN BE ACCELERATED BY SEVERAL OPTIONAL SCHEMES, INCLUDING A POINTWISE RESCALING TECHNIQUE.

CODE NAME: EQ3/EQ6

VARIANTS: EQ3/6 3245, EQ3/EQ6 EQ3NR, EQ6 3/15/84

CODE TYPE: GEOCHEMISTRY

DESCRIPTION: EQ3 PERFORMS DISTRIBUTION-OF-SPECIES CALCULATIONS FOR NATURAL WATER COMPOSITIONS; EQ6 USES THE RESULTS OF EQ3 TO PREDICT THE CONSEQUENCES OF HEATING AND COOLING AQUEOUS SOLUTIONS AND OF IRREVERSIBLE REACTIONS IN ROCK-WATER SYSTEMS. THE NEWTON-RAPHSON METHOD IS USED TO SOLVE THE GOVERNING EQUATIONS OF CHEMICAL EQUILIBRIUM FOR A SYSTEM OF SPECIFIED ELEMENTAL COMPOSITION AT FIXED TEMPERATURE AND PRESSURE. THE MINERALS PRESENT IN THE STABLE PHASE ASSEMBLAGE ARE FOUND BY SEVERAL EMPIRICAL METHODS. REACTION PATH MODELS MAY BE GENERATED BY USING THIS APPROACH IN CONJUNCTION WITH FINITE DIFFERENCES. THIS METHOD IS ANALOGOUS TO APPLYING HIGH- ORDER PREDICTOR-CORRECTOR METHODS TO INTEGRATE A CORRESPONDING SET OF ORDINARY DIFFERENTIAL EQUATIONS. EQ3 COMPUTES FROM INPUT ANALYTICAL DATA THE DISTRIBUTION OF CHEMICAL SPECIES (IONS, NEUTRAL SPECIES, ION PAIRS, AND COMPLEXES) IN AN AQUEOUS SOLUTION. THIS CALCULATION PRODUCES A MODEL OF THE FLUID, WHICH SPECIFIES THE CONCENTRATION AND THERMODYNAMIC ACTIVITY OF EACH CHEMICAL SPECIES OCCURRING IN THE CHEMICAL SYSTEM. THE PROGRAM THEN CALCULATES THE SATURATION STATE OF THE FLUID WITH RESPECT TO ALL RELEVANT MINERAL PHASES IN THE DATA BASE. MASS TRANSFER AND THE EFFECTS OF HEATING AND COOLING AQUEOUS SOLUTIONS AND OF IRREVERSIBLE REACTION IN ROCK-WATER SYSTEMS ARE MODELED.

CODE NAME: GEOTHER/VTH

VARIANTS: GEOTHER

CODE TYPE: GEOSPHERE TRANSPORT
THERMAL

DESCRIPTION: GEOTHER SIMULATES FLUID AND HEAT FLOW IN SINGLE AND TWO-PHASE GEOTHERMAL RESERVOIRS. IN ADDITION TO THREE-DIMENSIONAL CARTESIAN GEOMETRY, IT CAN TREAT TWO-DIMENSIONAL CYLINDRICAL GEOMETRY. FLUID FLOW AND HEAT TRANSPORT ARE DESCRIBED BY TWO COUPLED EQUATIONS THAT ARE POSED IN TERMS OF FLUID PRESSURE AND ENTHALPY. ALL THERMODYNAMIC PROPERTIES ARE ALSO SPECIFIED AS FUNCTIONS OF PRESSURE AND ENTHALPY. THE CODE ASSUMES LOCAL THERMAL EQUILIBRIUM BETWEEN ROCK AND FLUID, AND USE POROUS MEDIA APPROXIMATIONS. THE THERMODYNAMIC FUNCTIONS INCLUDED IN THE CODE ARE LIMITED TO PRESSURES LESS THAN 1.50 BARS AND TEMPERATURES LESS THAN 320°C, AND IT WOULD BE DIFFICULT TO MODIFY THE PROGRAM FOR FLUIDS WITH PROPERTIES SIGNIFICANTLY DIFFERENT FROM THOSE OF PURE WATER.

COMMENTS: REQUIRED DOCUMENTATION AS WELL AS VERIFICATION AND VALIDATION ACTIVITIES ARE PLANNED IN CONJUNCTION WITH THE DEVELOPMENT OF THE NT4 VERSION OF THE CODE.

CODE NAME: HYDRA-II

VARIANTS: HYDRA-I

CODE TYPE: THERMAL

DESCRIPTION: GENERAL PURPOSE THREE-DIMENSIONAL HYDROTHERMAL CODE THAT SOLVES ENERGY, MOMENTUM, CONTINUITY CONSERVATION EQUATIONS. THIS FINITE DIFFERENCE CODE CAN CALCULATE TEMPERATURES WITHIN CANISTERS CONTAINING SPENT FUEL SUB-ASSEMBLIES. THE CODE EXPLICITLY TREATS CONDUCTION, CONVECTION AND THERMAL RADIATION IN A FULLY COUPLED FASHION, AND IN THIS SENSE DIFFERS FROM THAT OF COX WHICH ONLY TREATS RADIATION. THE CODE IS INTENDED PRIMARILY TO PROVIDE STEADY-STATE SOLUTIONS BUT HAS BEEN USED FOR TRANSIENT PROBLEMS. IT CAN ALSO COMPUTE THE INTERNAL PRESSURE DISTRIBUTION AND GAS VELOCITIES. THE DOUGLAS AND GUNN TECHNIQUE IS USED FOR THE ENERGY EQUATION. INERTIAL FORCES ARE ASSUMED SMALL COMPARED TO VISCOUS FORCES FOR THE CONVECTIVE FLOW, AND THE SURFACES OF THE FUEL RODS ARE ASSUMED TO EMIT AND REFLECT RADIATION DIFFUSELY.

CODE NAME: KENO

VARIANTS: KENO IV, KENO IV/CG, KENO V, KENO V.A.

CODE TYPE: NUCLEAR RADIATION TRANSPORT

DESCRIPTION: KENO-IV IS A MULTIGROUP MONTE CARLO CRITICALITY PROGRAM WRITTEN FOR IBM 360 COMPUTERS. IT EXECUTES RAPIDLY AND IS FLEXIBLY DIMENSIONED SO THE ALLOWED SIZE OF A PROBLEM (I.E., THE NUMBER OF ENERGY GROUPS, NUMBER OF GEOMETRY CARDS, ETC., IS ARBITRARY) IS LIMITED ONLY BY THE TOTAL DATA STORAGE REQUIRED. THE INPUT DATA, WITH THE EXCEPTION OF CROSS SECTIONS, FISSION SPECTRA, AND ALBEDOS, MAY BE ENTERED IN FREE FORM. THE GEOMETRY INPUT IS QUITE SIMPLE TO PREPARE, AND COMPLICATED THREE-DIMENSIONAL SYSTEMS CAN OFTEN BE DESCRIBED WITH A MINIMUM OF EFFORT. THE RESULTS CALCULATED BY KENO-IV INCLUDE K-EFFECTIVE, LIFETIME AND GENERATION TIME, ENERGY-DEPENDENT LEAKAGES AND ABSORPTIONS, ENERGY- AND REGION-DEPENDENT FLUXES, AND REGION-DEPENDENT FISSION DENSITIES. CRITICALITY SEARCHES CAN BE MADE ON UNIT DIMENSIONS OR ON THE NUMBER OF UNITS IN AN ARRAY.

CODE NAME: LAYFLO 1.00

VARIANTS: UCBNE 30

CODE TYPE: GEOSPHERE TRANSPORT
SYSTEM MODELING

DESCRIPTION: LAYFLO SOLVES THE 1D RADIONUCLIDE TRANSPORT EQUATIONS FOR A POROUS MEDIUM INCLUDING THE EFFECTS OF ADVECTION, DISPERSION, LINEAR SORPTION AND THREE MEMBER DECAY CHAINS. SOLUTION IS BY LAPLACE TRANSFORMS USING A SEMI-ANALYTICAL APPROACH. THE MEDIUM CAN BE DIVIDED INTO UP TO SIX LAYERS WITH DISCRETE PROPERTIES. IF DISPERSION IS NEGLECTED ANY NUMBER OF LAYERS CAN BE CONSIDERED. THE SOURCE IS TAKEN AS OPERATING CONTINUOUSLY OR IN BAND RELEASE MODE. LAYFLO WAS FOUND TO GIVE GOOD AGREEMENT WITH THE CODES INCLUDED IN THE INTRACOIN BENCHMARKING STUDY FOR LEVEL 1, CASES 1 AND 1. AGREEMENT WITH EXPERIMENTAL DATA RELATING TO THE TRANSPORT OF NaCl HAS ALSO BEEN REPORTED.

CODE NAME: MAGNUM (2D/3D)

VARIANTS: NONE

CODE TYPE: GEOSPHERE TRANSPORT
THERMAL

DESCRIPTION: MAGNUM IS A TWO-DIMENSIONAL (OR THREE-DIMENSIONAL) FINITE ELEMENT CODE DESIGNED TO SIMULATE TRANSIENT GROUNDWATER FLOW AND HEAT TRANSPORT IN FRACTURED-POROUS ROCK SYSTEMS. THE THEORETICAL FRAMEWORK OF THE CODE IS BASED ON CONCEPTS FOR A POROUS CONTINUUM AND FOR DISCRETE CONDUITS. IN PARTICULAR, A DUAL-POROSITY APPROACH IS USED TO REPRESENT THE CONTINUOUS ROCK MASS, WHERE FLOW THROUGH PLANAR CONDUITS IS DESCRIBED BY POISEUILLE'S EQUATION. THE MAGNUM-2D CODE MODELS A CONTINUOUS ROCK MASS REPRESENTED WITH ISOPARAMETRIC FINITE ELEMENTS; LINE ELEMENTS ARE EMBEDDED ALONG THE SIDES OF THE TWO-DIMENSIONAL ELEMENTS TO REPRESENT DISCRETE FRACTURES. THE MODEL ACCOMMODATES COMPLEX STRATIGRAPHIC FEATURES WITH VARIABLE MEDIA PROPERTIES AND PROVIDES OPTIONS FOR COUPLED OR UNCOUPLED SOLUTIONS OF HEAT AND FLOW EQUATIONS. THE CODE CAN BE USED TO CALCULATE THE FLUID FLOW AROUND A REPOSITORY DURING THE THERMAL PHASE. IT PROVIDES FLOW FIELD CALCULATIONS FOR INPUT TO PATHLINE AND TRANSPORT MODELS. RESULTS FROM MAGNUM-2D COULD PROVIDE BOUNDARY CONDITIONS TO FAR-FIELD FLOW CODES, SUCH AS USGS2D OR FE3DGW. THE CODE IS INTERFACED WITH THE CODES PATH AND CHAINT.

CODE NAME: NORIA

VARIANTS: NORIA2

CODE TYPE: GEOSPHERE TRANSPORT
THERMAL

DESCRIPTION: NORIA IS A FINITE ELEMENT PROGRAM WHICH SOLVES FOUR NONLINEAR PARABOLIC PARTIAL DIFFERENTIAL EQUATIONS SIMULTANEOUSLY. THE FOUR EQUATIONS DESCRIBE THE TRANSPORT OF WATER, WATER VAPOR, AIR AND ENERGY THROUGH PARTIALLY SATURATED POROUS MEDIA. THE GAS PHASE IS TAKEN TO BE IDEAL. THE NUMERICAL PROCEDURE USES THE STANDARD GALERKIN FINITE ELEMENT METHOD TO HANDLE SPATIAL DISCRETIZATION OF TWO DIMENSIONAL DOMAINS (PLANAR OR AXISYMMETRIC). TIME INTEGRATION IS PERFORMED BY A THIRD ORDER PREDICTOR CORRECTOR SCHEME THAT USES ERROR ESTIMATES TO AUTOMATICALLY ADJUST TIME STEP SIZE SO AS TO MAINTAIN UNIFORM LOCAL TIME TRUNCATION ERROR THROUGHOUT THE CALCULATION. MOST MATERIAL PROPERTIES, SUCH AS PERMEABILITY, CAN EITHER BE SET TO CONSTANT VALUES OR CAN BE DEFINED AS FUNCTIONS OF THE DEPENDENT OR INDEPENDENT VARIABLES BY USER SUPPLIED SUBROUTINES.

COMMENTS: NONE

CODE NAME: ORIGEN2

VARIANTS: ORIGEN

CODE TYPE: NUCLIDE INVENTORY

DESCRIPTION: ORIGEN2 IS A REVISED AND UPDATED VERSION OF ORIGEN (OAK RIDGE ISOTOPE GENERATION). ORIGEN2 PERFORMS A POINT-DEPLETION CALCULATION ON REACTOR FUEL, IRRADIATION OF REACTOR COMPONENTS, AND DETERMINES THE COMPOSITION, RADIATION, AND SPECTRA OF ANY PART OF THE FUEL CYCLE. A MATRIX EXPONENTIAL TECHNIQUE IS APPLIED TO COMPUTE NUCLIDE CONCENTRATIONS. IN SOME CASES THE BATEMAN EQUATION AND SECULAR EQUILIBRIUM ARE USED. THE CROSS SECTIONS ARE ASSUMED TO BE CONSTANT, EXCEPT FOR A NUMBER OF KEY ACTINIDE REACTIONS THAT ARE VARIED WITH BURNUP. NUCLEAR LIBRARIES SUPPLIED WITH THE CODE PROVIDE SPACE AND SPECTRUM-AVERAGED CROSS SECTIONS. ONE-GROUP FLUX IS ASSUMED. ORIGEN2 IS PROVIDED FREE BY THE ORNL-RADIATION SHIELDING INFORMATION CENTER. ORIGEN2 IS USED TO IRRADIATE AND DECAY SPENT FUEL, AND SIMULATE NUCLEAR FUEL CYCLES. OUTPUT VALUES ARE USED AS SOURCE TERMS FOR RADIATION EXPOSURE AND RADIATION SHIELDING CODES.

CODE NAME: PATH (2D/3D)

VARIANTS: NONE

CODE TYPE: GEOSPHERE TRANSPORT
SYSTEM MODELING

DESCRIPTION: COMPUTATION OF FLUID FLOW PATHS AND TRAVEL TIMES USING MAGNUM GENERATED FLOW FIELDS. PATHS IS A (2D/3D) PRELIMINARY ANALYSIS TOOL TO DETERMINE THE MOVEMENT OF WATER TRANSPORTED CONTAMINANTS ACCIDENTALLY RELEASED FROM A WASTE STORAGE FACILITY. THE MODEL WAS PURPOSELY DESIGNED TO PROVIDE A BALANCE BETWEEN MODELLING SOPHISTICATION AND THE LIMITED DATA USUALLY AVAILABLE FOR INITIAL EVALUATIONS OF SUBSURFACE CONTAMINATION PROBLEMS. ACCORDINGLY, THE BASIS OF THE CODE IS AN IDEALIZED ANALYTIC SOLUTION FOR THE GROUNDWATER POTENTIAL DISTRIBUTION, PATHLINE DIFFERENTIAL EQUATIONS ARE WRITTEN AND THEN NUMERICALLY SOLVED BY THE CODE TO GIVE THE PATHS OF THE FLUID PARTICLES AND THEIR ADVANCE WITH TIME TOWARD THE OUTFLOW BOUNDARY. THE MODEL TREATS BOTH STEADY-STATE AND TRANSIENT SATURATED FLOW SYSTEMS. WELLS MAY ALSO BE PRESENT. GEOCHEMICAL RETARDATION IS CONSIDERED, BUT DISPERSION (AND RADIOACTIVE DECAY) IS IGNORED.

CODE NAME: SAGUARO

VARIANTS: MARIAH

CODE TYPE: GEOSPHERE TRANSPORT
THERMAL

DESCRIPTION: SAGUARO IS A FINITE ELEMENT CODE DEVELOPED TO SOLVE 2D, TIME DEPENDENT PROBLEMS OF INCOMPRESSIBLE SINGLE PHASE WATER AND ENERGY TRANSPORT THROUGH POROUS MEDIA WHICH MAY BE PARTIALLY OR FULLY SATURATED. THE TWO TRANSPORT EQUATIONS (MASS AND ENERGY), WHICH MODEL THE FLOW INCORPORATE DARCY'S LAW, THE BOUSSINESQ APPROXIMATION, THE SORET EFFECT, CONDUCTION AND CONVECTION. THE RESULTING NON LINEAR PARABOLIC EQUATIONS ARE SOLVED IN FINITE ELEMENT FORM USING AN ALGORITHM RELATED TO THE STANDARD CRANK- NICOLSON METHOD. THE MATRIX SOLUTION PROCEDURE IS A FORM OF GAUSSIAN ELIMINATION. PROGRAM OUTPUT INCLUDES THE VARIATION OF HYDRAULIC HEAD, TEMPERATURE, VELOCITY AND MOISTURE CONTENT WITH TIME AND POSITION. OUTPUT PRESSURE OF VELOCITY FIELDS CAN BE COUPLED TO THE RADIONUCLIDE TRANSPORT CODE FEMTRAN. SAGUARO IS A DIRECT DEVELOPMENT OF THE CODE MARIAH WHICH SOLVES THE FLOW AND HEAT TRANSFER EQUATIONS FOR A FULLY SATURATED MEDIUM.

CODE NAME: SANCHO

VARIANTS: HONDO

CODE TYPE: ROCK MECHANICS
MECHANICAL STRESS

DESCRIPTION: SANCHO IS A MODIFICATION OF THE TRANSIENT DYNAMIC CODE, HONDO, WHICH CAN TREAT TWO-DIMENSIONAL FINITE STRAIN, THERMOELASTICITY, MOHR-COULOMB FAILURE, AND THERMOELASTIC CREEP PROBLEMS. ELASTIC-PLASTIC MODES, INCLUDING COMPACTION, PRESSURE-DEPENDENT YIELD, AND TENSILE FAILURES, CAN ALL BE CONSIDERED. THE CODE CAN TREAT RELATIVE MOTION ALONG SLIP LAYERS. CLOSURE OF EVACUATIONS AND RESULTING CONTACT BETWEEN WALLS AND FLOOR AND CEILING CAN ALL BE TREATED. JOINTING IS NOT MODELED. THE SOLUTION TECHNIQUE TESTS IN EQUILIBRIUM RATHER THAN STRESS OR STRAIN INCREMENT TO DETECT CONVERGENCE. DYNAMIC RELAXATION IS USED TO CONTROL THE LOAD STEPS SO THAT THE CODE, ALTHOUGH COSTLY, IS VERY RELIABLE.

CODE NAME: SINDA

VARIANTS: NONE

CODE TYPE: THERMAL
SYSTEM MODELING

DESCRIPTION: SINDA ORIGINALLY NAMED CINDA3G, IS INTENDED PRIMARILY FOR HEAT TRANSFER ANALYSIS OF SYSTEMS REPRESENTED IN ELECTRICAL ANALOG, LUMPED PARAMETER FORM. ITS USE CAN BE EXTENDED TO INCLUDE OTHER CLASSES OF PHYSICAL SYSTEMS WHICH CAN BE MODELED IN THIS FORM. SINDA CAN ADDRESS STEADY-STATE OR TRANSIENT HEAT TRANSFER PROBLEMS DEFINED IN ESSENTIALLY ANY GEOMETRY SYSTEM. THE THERMAL CONDUCTANCE, THERMAL CAPACITANCE, AND SOURCE TERMS MAY BE SPACE-, TEMPERATURE-, AND/OR TIME-DEPENDENT. THE HEAT TRANSFER MODEL MAY INCLUDE CHANGE-OF-STATE AND MASS FLOW CALCULATIONS. BOUNDARY CONDITIONS INCLUDE PRESCRIBED TEMPERATURE, FORCED AND NATURAL CONVECTION, RADIATION, AND PRESCRIBED HEAT FLUX. THE SINDA LIBRARY CONTAINS A LARGE ASSORTMENT OF SUB- ROUTINES WHICH SOLVE THE THERMAL NETWORK USING DIFFERENT METHODS. STEADY-STATE TECHNIQUES INCLUDE BLOCK ITERATION, SUCCESSIVE POINT ITERATION WITH EXTRAPOLATION, AND AN ACCELERATED SUCCESSIVE POINT ITERATION METHOD FOR RADIATION-DOMINATED PROBLEMS. EACH OF THESE TECHNIQUES CAN EMPLOY RELAXATION. TRANSIENT TECHNIQUES INCLUDE THE EXPLICIT FORWARD-DIFFERENCING METHOD WITH VARIATIONS, THE EXPLICIT EXPONENTIAL PREDICTION METHOD, THE DUFORT-FRENKEL EXPLICIT METHOD, AND AN IMPLICIT METHOD THAT RANGES BETWEEN CRANK-NICHOLSON AND FULLY IMPLICIT.

CODE NAME: TRACR 3D

VARIANTS: NONE

CODE TYPE: GEOSPHERE TRANSPORT
ROCK MECHANICS

DESCRIPTION: TRACR3D IS A 1, 2 OR 3D MODEL OF SOLUTE TRANSPORT IN POROUS FRACTURED MEDIA WHICH CAN BE EITHER FULLY SATURATED OR NOT. THE PROGRAM TAKES ACCOUNT OF ADVECTION, DISPERSION, SORPTION AND N CHAIN RADIONUCLIDE DECAY. SORPTION IS INCLUDED EITHER AS A SIMPLE LINEAR EQUILIBRIUM MODEL OR AS A NONEQUILIBRIUM SATURABLE MODEL. THE LATTER MODEL CAN BE TAKEN AS REVERSIBLE OR IRREVERSIBLE. FRACTURES ARE TAKEN ACCOUNT OF BY CONSTRUCTING A NETWORK OF CRACKS, WHICH MAY ONLY RUN HORIZONTALLY OR VERTICALLY, AND ASSUMING THAT SOLUTE TRANSPORT OCCURS ONLY BY ADVECTION. THE FRACTURE NETWORK CAN BE CONSTRUCTED EXPLICITLY, IMPLICITLY (DISTRIBUTION OF CRACK WIDTHS AND FRACTURE SPACING PARAMETERS) OR RANDOMLY. SOLUTION IS BY AN IMPLICIT APPROACH FOR THE TRANSPORT EQUATIONS.

CODE NAME: TRUMP - NO TRUMP

VARIANTS: NONE

CODE TYPE: THERMAL

DESCRIPTION: TRUMP EVALUATES 1D, 2D, OR 3D TEMPERATURE DISTRIBUTIONS (OR ANALOGOUS QUANTITIES) FOR STEADY STATE OR TRANSIENT CONDITIONS. THE THERMAL INPUT MAY BE DUE TO CHEMICAL EFFECTS (OR RADIOACTIVE DECAY), POSSIBLY INVOLVING PHASE CHANGES, AS WELL AS THE USUAL POINT SOURCES. THE PROGRAM USES A FINITE DIFFERENCE METHOD AND ALLOWS THE EQUATION PARAMETERS TO VARY WITH POSITION, TIME OR FIELD VARIABLES. TIME STEPPING IS BY A COMBINATION OF IMPLICIT AND EXPLICIT SCHEMES. A WIDE VARIETY OF INITIAL AND BOUNDARY CONDITIONS IS AVAILABLE. THE PROGRAM HAS BEEN USED TO PREDICT THE 3D UNSTEADY-STATE TEMPERATURE PROFILES WITHIN A UNIT CELL OF A DEEP GEOLOGICAL WASTE REPOSITORY.

CODE NAME: TRUST

VARIANTS: NONE

CODE TYPE: GEOSPHERE TRANSPORT
MECHANICAL STRESS
ROCK MECHANICS

DESCRIPTION: 3-D SATURATED AND UNSATURATED FLOW WITH DEFORMATION OF POROUS MATRIX, FRACTURED MEDIA, TIME-DEPENDENT BOUNDARY CONDITIONS AND SOURCES, COMPLEX GEOMETRY. TRUST (BASED ON THE TRUMP MODEL, WHICH IS ACTUALLY A COMPUTER PROGRAM FOR TRANSIENT AND STEADY-STATE TEMPERATURE DISTRIBUTIONS IN MULTIDIMENSIONAL SYSTEMS) HAS BEEN USED IN SUBSURFACE FLOW AND INVOLVES INTEGRATED FINITE DIFFERENCE METHODS (IFDM). THE IFDM METHODS, WIDELY USED EFFECTIVELY FOR SOME TIME, WERE APPARENTLY DEVELOPED DURING THE EARLY 1960'S FROM THE ENGINEER'S FEEL FOR THE PHYSICAL SYSTEM AND HAVE ONLY MORE RECENTLY GAINED THE RESPECTABILITY OF FORMAL MATHEMATICAL DERIVATION. SUCH METHODS ARE SIMILAR TO THE GELERKIN FINITE-ELEMENT APPROACH, AND THE BEST FEATURES OF BOTH MAY BE INCORPORATED INTO FUTURE IMPROVED MODELS (ARH-ST-140).

CODE NAME: UNSAT2 - VARIABLY SATURATED FLOW

VARIANTS: NONE

CODE TYPE: GEOSPHERE TRANSPORT

DESCRIPTION: UNSAT 2 IS A FINITE ELEMENT PROGRAM DEVELOPED FOR SOLVING PROBLEMS OF NON-STADY SEEPAGE IN SATURATED-UNSATURATED POROUS MEDIA, INVOLVING TWO SPATIAL DIMENSIONS IN THE HORIZONTAL OR VERTICAL PLANE. THREE-DIMENSIONAL PROBLEMS CAN BE HANDLED PROVIDED THAT THE FLOW PATTERN RETAINS AN AXIAL SYMMETRY ABOUT THE VERTICAL CO-ORDINATE. THE FLOW REGION MAY HAVE ANY COMPLEX SHAPE AND IT MAY CONSIST OF DIFFERENT SOIL MATERIALS ARRANGED IN ARBITRARY PATTERNS. EACH SOIL PROPERTY MAY EXHIBIT AN ARBITRARY DEGREE OF LOCAL ANISOTROPY, WITH PRINCIPAL HYDRAULIC CONDUCTIVITIES ORIENTED AT ANY DESIRED ANGLE WITH RESPECT TO THE CO-ORDINATES. A WIDE RANGE OF TIME-DEPENDENT BOUNDARY CONDITIONS CAN BE TREATED. IN ADDITION, THE PROGRAM CAN HANDLE WATER UPTAKE BY PLANTS ASSUMING THAT THE MAXIMUM RATE OF TRANSPIRATION IS DETERMINED BY ATMOSPHERIC CONDITIONS, WHILE THE ACTUAL RATE OF UPTAKE DEPENDS ON ATMOSPHERIC AS WELL AS SOIL AND PLANT CONDITIONS. INTERNAL VOLUMETRIC SINKS OR SOURCES OF PRESCRIBED STRENGTH CAN BE INCLUDED IN THE FLOW SYSTEM AT ANY STAGE OF THE COMPUTATION. UNSAT 2 IS CONSIDERED A FAR-FIELD CODE IN THE SENSE THAT THE FLOW IS ANALYZED OUTSIDE THE DISTURBED ZONE.

CODE NAME: XOQDOQ.3P

VARIANTS: XOQDOQ.1P, 2P

CODE TYPE: AIR DISPERSION
DOSE-TO-MAN

DESCRIPTION: XOQDOQ IS A COMPUTER CODE USED BY THE NRC IN ITS LONG TERM METEOROLOGICAL EVALUATION FOR ROUTINE RELEASES FROM COMMERCIAL NUCLEAR POWER REACTORS. USING A STRAIGHT-LINE AIRFLOW MODEL, THIS CODE IMPLEMENTS THE ASSUMPTIONS OUTLINED IN SECTION C (EXCLUDING CLA AND CLB) OF REGULATORY GUIDE 1.111, METHODS FOR ESTIMATING ATMOSPHERIC TRANSPORT AND DISPERSION OF GASEOUS EFFLUENTS IN ROUTINE RELEASES FROM LIGHT-WATER-COOLED REACTORS. FOR ROUTINE PLANT RELEASES, IT CALCULATES AVERAGE RELATIVE EFFLUENT CONCENTRATIONS AND AVERAGE RELATIVE DEPOSITION VALUES (D/Q'S) AT LOCATIONS SPECIFIED BY THE USER, AND AT STANDARD RADIAL DISTANCES AND SEGMENTS FOR DOWNWIND SECTORS. IT ALSO CALCULATES THESE VALUES AT SPECIFIED LOCATIONS FOR INTERMITTENT RELEASES.

COMMENTS: NONE

COMPUTER(S): MINI

INTERFACES: POSTPROCESSOR- CASPAR, REV1

EXTERNAL FILES: MET. DATA AND SOURCE TERM INFORMATION

ACQUISITION: YES, NONPROPRIETARY

APPENDIX A

CONTRIBUTORS TO THE COMPENDIUM

The list of contributors to the compendium has been updated to reflect, where possible, the current status of each contributor of codes listed in Sect. 3. Those contributors are listed below, alphabetically by company name. Contributor names followed by (**) appear to have left employment of the company by which they are listed. The phone numbers for each person have been removed for individuals at large companies, and the general information number for the company has been provided. While many of the phone numbers listed in Sect. 3 may be correct, it was impossible to verify and/or update each listing.

APPENDIX B

SUMMARY OF COMPUTER CODE LITERATURE

This appendix provides a summary listing of the literature used in the preparation of this report. As stated in Sects. 1 and 2, the references listed in this appendix represent a number of previous computer code compendia. From the documents, a list of over 1000 different computer code names was extracted. Only about 100 of the computer codes named in Sect. 3 were found among the 1000 code names found in these many references.

APPENDIX B

1. ONWI-78, Tabulation of Waste Isolation Computer Models, Science Applications International Corporation, August 1981.
2. EUR-6179, Modeling of Artificial Radioactivity Migration in the Environment: A Survey, 1979.
3. PNL-3509 (Pt. 1), Standardized Input for Hanford Environmental Impact Statements, May 1981.
4. ORNL-5382 (early version of ORNL-5573), The Evaluation of Models Used for the Assessment of Radionuclide Releases to the Environment, Progress Report, April 1976 - December 1977, June 1978.
5. ORNL-5573, Evaluation of Models Used for the Assessment of Radionuclide Releases to the Environment: Summary of Documentation, April 1979 - June 1979, April 1980.
6. ORNL/TM-5830, Compilation of Documented Computer Codes Applicable to Environmental Assessment of Radioactivity Releases, April 1977.
7. INFO-0149, Shallow Disposal of Radioactive Waste, Survey of Models, February 1985.
8. EUR-8669, Directory of Computer Programs for Assessment of Radioactive Waste Disposal in Geologic Formations, 1984. (Final Report EUR-8669-EN, citation 1115234 PB85-139002/XAB) (Earlier Version DOE/RW-83-066).
9. DOE/TIC-11228, Computer Codes for Environmental Assessments, 1980.
10. PNL-2874, Waste Isolation Safety Assessment Program Technical Progress Report for FY-1978, A. Bradstetter, et al.
11. DOE/RW-84.069, NPC(W) R-760, Computer Models for Nuclide Migration from Radioactive Waste Repositories, March 1984.
12. ANL-EES-TM-256, Radioactive Waste Isolation in Salt: Special Advisory Report on the Status of the Office of Nuclear Waste Isolation's Plans for Repository Performance Assessment, October 1983.
13. ANL/EES-TM-256, Radioactive Waste Isolation in Salt: Peer Review of the ONWI's Plans for Repository Performance Assessment, October 1983.
14. SAND-82-1927C, CONF-830528-59, Thermal and Structural Code Evaluation, May 1983.

15. ONI-5, Fractured Rock Modeling in the National Waste Terminal Storage Program: A Review of Requirements and Status, May 1983.
16. EPA-250/3-80-006, Population Risks from Disposal of High-Level Radioactive Wastes in Geologic Repositories, December 1982.
17. ANL/EIS-14, Calculation of Unsaturated Hydraulic Conductivity, June 1982.
18. SAND-81-1293C, CONF-810861-3, Role of Benchmarking in Assessment Capability to Predict Room Response in Bedded Salt Repositories, 1981.
19. Y/OWI/SUB-77/45705, Evaluation of Environmental Dosimetry Models for Applicability to Possible Radioactive Waste Repository Discharge, September 1977.
20. Vol. 2, Interim Technical Records Source Index - Conceptual Design of a High-Level Nuclear Waste Repository in Salt, Basis for Design Document, Rev. 2, Fluor Corp., October 1, 1984.
21. ONWI-98, Proceedings of a Workshop on Thermo-chemical Modeling for a Hardrock Waste Repository. Also designated UCAR-10043, Fluor File No. 660 or 1065, Tech. Records ID No. TD/O/A-004.
22. ANL-8040, Computer Program Summaries, (USAEC) I-54 and Supplements (1-6), Fluor File No. 1352, Tech. Records ID No. TD/O/A-028.
23. PNL-SA-13928, Analysis of Spent Fuel Performance in a Geologic Repository. Annual Meeting of American Ceramic Society, April 1986.
24. Computer Software Designed For, or Applicable to, the Waste Management Activities of the Commercial LWR Fuel Cycle (PWR), Memo from B. Cole (PNL) to R. McKee (September 14, 1984).
25. Survey of Analytical Models of Radioactive Waste Management, Memo from R. Holt (DOE) to E. Hanrahan (July 22, 1983).
26. Performance Assessment Plan, Appendix A: Computer Code Summaries and Code Verification, Validation and Documentation, Rev. 1 (draft), SAIC, February 1986.
27. NUREG/CR-2782, A Summary of Repository Siting Models, GeoTrans, July 1982.
28. NUREG/CR-3066, Parameters and Variables Appearing in Repository Siting Models, GeoTrans, December 1982.
29. NUREG/CR-3097, Benchmark Problems for Repository Siting Models, GeoTrans, December 1982.

30. NUREG/CR-3209, A Summary of Computer Codes for Radiological Assessment, Teknekron, March 1983.
31. NUREG/CR-3160, Parameters and Variables Appearing in Radiological Assessment Codes, Teknekron, June 1983.
32. NUREG/CR-3451, Benchmark Problems for Radiological Assessment Codes, Teknekron, September 1983.
33. NUREG/CR-3450, A Summary of Repository Design Models, Acres American, October 1983.
34. NUREG/CR-3586, Parameters and Variables Appearing in Repository Design Models, Acres American, December 1983.
35. NUREG/CR-3636, Benchmark Problems for Repository Design Models, Acres American, February 1984.
36. NUREG/CR-3699, A Summary of Computer Codes for Waste Package Performance Assessment, CorSTAR, March 1984.
37. Code Inventory for Yucca Mountain Performance Assessment, Sandia National Laboratories, Letter from R. Prindle (Sandia) to Z. Panahi (August 14, 1986).
38. SAND-84-0996, Benchmarking NNWSI Flow and Transport Codes: COVE 1 Results, June 1985.
39. CONFERENCE-810861, Data Requirements for Integrated Near Field Models, OECD Nuclear Energy Agency Workshop on Near-Field Phenomena in Geologic Repositories for Radioactive Waste (Paris, France), August 1981.
40. PNL-3791, Factors Affecting Criticality for Spent Fuel Materials in a Geologic Setting, April 1981.
41. Argonne Code Center, Listing of Available DOE Computer Codes, ANL.
42. RSIC, Radiation Shielding Information Center, Listing of Computer Codes, ORNL.
43. ONWI, Computer Code Semiannual Status Summary, Letter from W. Carbiener to J. Neff (ONWI to SRPO), June 1985.
44. NUREG/BR-0083, Computer Codes and Mathematical Models, Vol. 1, No. 1, February 1983.
45. NUREG/BR-0083, Computer Codes and Mathematical Models, Vol. 1, No. 2, May 1985.
46. NUREG/BR-0083, Computer Codes and Mathematical Models, Vol. 1, No. 3, September 1985.

47. NUREG/BR-0083, Computer Codes and Mathematical Models, Vol. 1, No. 4 March 1986.
48. ORNL/TM-5830, A Compilation of Documented Computer Codes Applicable to Environmental Assessment of Radioactivity Release, April 1977.
49. ORNL/SUB-79/13617/2, SAI/OR-565-2, Low-Level Waste Management: A Compilation of Models and Monitoring Techniques, Vol. 1 and Vol. 2.
50. NNWSI, Performance Assessment Methods, Memo from D. Vogt to R. Zimmerman and H. Dokuzoguz (September 23, 1986).

APPENDIX C

GLOSSARY OF COMPUTER CODE TERMINOLOGY

This appendix provides a glossary of common terms and definitions used to describe computers, computer codes, mathematical modeling, and the use of computer codes to analyze scientific or engineering problems.

APPENDIX C

Acceptance testing	When a computer code is installed on a computer for operation, acceptance testing is performed by the user to: (1) evaluate function, performance and interfaces; and (2) assure that calculation results obtained with the installed code are consistent with calculational results obtained when the computer code was developed and tested.
Application	Use of a computer code, program, model, software, or other computer items to solve specific problems.
Baseline documents	Minimum documents required to describe a computer code, which includes: (1) users' instructions (i.e., "Users' Guide"); (2) a code listing (i.e., part of "Programmer's Guide"); (3) internal verification documentation (i.e., "Assessment Report"); and (4) descriptions of numerical methods and mathematical models (i.e., "Technical Reference Manual").
Benchmark	A benchmark (as in "benchmark experiment") is a standard condition which may be used in the verification of computer codes and models. A benchmark activity must be sufficiently documented so that its exact conditions can be reproduced. The experiment shall be as simple ("clean") as possible to allow exact modeling in the computer model. Experimental uncertainties shall be discussed and evaluated. Calculational benchmarks may be used in code intercomparisons provided that the code generating the benchmark data has been experimentally validated.
Benchmarking	Using a test problem, including input and output results, for verifying correct model operation or for comparing software.
Change control	An orderly management system for review and approval of computer code and software documentation changes.

Code	<ol style="list-style-type: none"> 1. A set of instructions written in any programming language to be acted upon by a computer. 2. The process of developing and writing the computer instructions.
Code custodian	A designated individual with responsibility for coordinating control of a computer code.
Computer program	A procedure that has been coded for a computer and designed for solving a problem, including such problems as collection and processing of data and presentation of results. (Source: letter to E. Bonano from K. Golligher, dated 9/26/84).
Configuration control	A management system for orderly control of software, including methods used for marking, controlling, and storing software and its associated documentation.
Data	<ol style="list-style-type: none"> 1. Representation of facts/concepts in a formalized manner suitable for communication, interpretation, or processing by human or automatic means. 2. Any representation, such as characters or analog quantities, to which meaning is or might be assigned. 3. Same as input data, numeric data, and output data.
Development	Design and construction of a software package, including mathematical models, associated computer programs, and specific calculations which has received peer review and management approval (i.e., the "Technical Reference Manual").
Engineering/ Scientific (i.e., Technical)	A computer code (or group of codes) which reads input data, computes results and provides a problem analysis. Engineering/scientific codes may be obtained from external sources or may result from the development process. Does not include computer system supported and widely used applications software such as LOTUS, RS/1, SAS, DISSPLA, or BMDP.
Hardware	Physical equipment for data processing, as opposed to the computer code or method of use.

Independent review	A technical review of a computer code by equally (or more) technically competent personnel who were not directly involved in the code's development. Reviewers may be members of the programmer's organization.
Input	Data, information, and instructions received by a computer.
Intercomparisons	When no suitable field or laboratory experiments are available to validate a computer model, computer code intercomparisons may be performed. Intercomparisons usually involve simplified model assumptions which can be exactly modeled and provide direct comparison of the results between two or more different computer codes and/or models.
Interface	A boundary, usually between hardware items, but which can be between software items (i.e., between subroutines and the main program), whereby information may be transferred.
Licensing activity	Any activity from which the data and/or conclusions may be used to support a construction or operation licensee application to the Nuclear Regulatory Commission (NRC).
Listing	A complete record of computer instructions, input and output - contained, used or generated by a computer code.
Mathematical model	A mathematical representation of a process or system.
Model	A representation of a system or process.
Modification	Changes made to computer codes and software documentation, or the product of such a change.
Minor code modifications	Changes to a code that do not affect the code's logic (e.g., change in array dimensions or to the input/output format).
Numerical model	A representation of a process or system using numerical methods.
Output	Computer results (e.g., answers to mathematical or statistical problems, analytical or accounting figures or production schedules). Information transferred from internal storage of a computer to external storage, or to any device

exterior to a computer (e.g., a printer). The device or collective set of devices used for taking data out of a device. A channel for expressing a state on a device or logic element. Intermediate results from computer code modules.

Peer review	A documented, fully traceable review performed by qualified (internal and/or external) personnel who are independent of the original work performed but who have the technical expertise to perform the work (i.e., peers). Peer reviews are in-depth, critical reviews and evaluations of project documents, material, or data that require interpretation of judgement to verify or validate results of conclusions; or when the conclusions, material, or data contained in the report go beyond the existing state of the art.
Quality assurance of computer software	Those planned and systematic actions necessary to provide adequate confidence that the software will serve its intended purpose.
Retrievability	The capability to access all previous versions of software developed over a reasonable period of time, even though they may not be executable due to hardware and/or system software changes.
Revision	An established, verified, and/or validated (and if appropriate, acceptance tested and approved) computer code or procedure as established under a configuration control method.
Run	The sequential operation of a computer code on one set of parameters/data/input until completion.
Software	<ol style="list-style-type: none"> 1. All instructions which are input to a computer that cause it to function in any mode, which includes (1) operating systems, (2) supervisory systems, (3) compilers and (4) test routines. Software may also include software documentation. See also "Code Mathematical Model". 2. Written or printed data, e.g. (1) programs, (2) routines, (3) symbolic languages, and (4) control languages essential to the operation of computers.

Specifications	Documented statements intended to clearly and accurately describe essential features and requirements of a computer program.
Standardization	The standardization of computer codes is the degree to which the same or similar models and methods are employed to solve similar problems at different locations. The ultimate in standardization would be the use of the exact same models and programs at all sites. Standardization is necessary to the point that it is cost effective and results in accurate results for the different uses.
Test	A procedure that compares performance of a computer code to (1) specified technical, operational and performance requirements and (2) acceptance criteria.
Traceability	The ability to identify the actual configuration of the software used in the calculations. This characteristic is closely related to retrievability, which is described in detail above.
Transferability	Computer code transferability is the degree, and ease of which, a given computer code can be used on a variety of different computers. Computer codes should be designed for a maximum of transferability, which will entail standard computer languages and coding, to enable easy conversion to both other machines of the same type, as well as different types.
User	A person who operates the computer code. A person who uses results of the computer code's execution.
Users' guide	Documentation that supplies application information directed at the user and provides enough information to serve as a referral document for preparation of input data and interpretation of output.
Utility code	A computer code (or code segment) which may be easily verified and which performs a simple function, such as conversion of units, change in data format, or manipulation of graphics or database software.

Validation	In waste management applications, the object of validation is the assurance that the model embodied in a computer program is a correct representation of the process or system for which it is intended. Validation is generally accomplished by using computer programs to simulate field or laboratory experiments. For cases where these experiments are well defined, validation is possible. However, parameters that control experiments involving groundwater flow and contaminant transport (especially in fractured rock), are too poorly defined at this stage to allow for the validation of computer programs. In these cases, the exercise of applying the programs to field experiments is still a valuable test but falls short of "validation."
Verification	The process which demonstrates that the software correctly performs its stated capabilities. This is primarily done through a set of test problems designed to show that the stated equations are solved in a satisfactory manner, but not necessarily indicating that the model is a valid representation of any particular physical system. In addition, these problems can be used for familiarizing users with the function and execution of the computer program and providing a check between standard versions of the program on various computer systems.
Verification and/or validation plan	An approved method for verification and/or validation plan of a developed or changed computer code which identifies types of tests, inputs, sequence, documentation and criteria for the verification and/or validation process.
Version	A uniquely identified computer code product, based on an existing computer code, that usually has a significant new code or new function. Each version has its own documentation, testing and code listing and is the result of an approved computer code change.

INTERNAL DISTRIBUTION

1.	R. C. Ashline	26-30.	J. W. Roddy
2.	S. G. Bloom	31.	R. W. Roussin
3.	A. G. Croff	32.	J. H. Saling
4.	C. W. Forsberg	33.	R. Salmon
5.	E. J. Frederick	34.	F. M. Scheitlin
