Michael Walker is a Technology Manager with JELD-WEN, Product Integrity Group, and has been employed with JELD-WEN for 5 years. Mr. Walker has been involved in the development of new technology to investigate building envelope design/issues, and to improve the efficiency of Product Integrity Group's, inspection team. His primary focus has been on electronic hardware, and software development. His work has led to the co-invention of the BEEMS system, a remote wireless in-wall temp and humidity monitoring service, that is currently installed and monitoring over 12 sites. He is also involved in laboratory and field testing of windows, and doors and the window/door to wall interface relevant to air and water infiltration. He has training and experience in the use of thermographic imaging as a non destructive forensic tool. He also has participated in several database design and theory classes.
