

2009 R&D 100 Award Winner

PulseForge™ 3100 with Pulse Thermal Processing

A new technology for high-speed drying, curing, sintering, or annealing of high-temperature materials on plastic and paper substrates.

Developed by
Novacentrix™
Oak Ridge National Laboratory

Sponsored by
Department of Energy's Laboratory Directed Research and Development Program,
DOE Energy Efficiency and Renewable Energy Industrial Technology Program;
the Defense Advanced Research Projects Agency,
Defense Sciences Office for effort at Oak Ridge National Laboratory.

Recipients:
Novacentrix participants (left)
Oak Ridge National Laboratory participants (right)
