Oxides and Electrical Transport at ORNL/UT
A. P. Baddorf

For over five years, the Low-Dimensional Materials By Design group at ORNL and UT has had a focus on growth and properties of oxide materials. This talk will summarize new results from this activity and indicate possible directions for future research. A survey of the experimental tools employed will be presented to describe the group's capabilities. Finally, opportunities for collaboration with others at the workshop will be outlined.

Oak Ridge National Laboratory, managed by UT-Battelle, LLC, for the U.S. Dept. of Energy under contract DE-AC05-00OR22725.
