

# Cask Size and Weight Reductions Through the Use of DUCRETE

**Dr. Les Dole, Dr. Juan Ferrada,  
and C. H. Mattus**

Russian–American Workshop on Use of Depleted  
Uranium and Review of International Science and  
Technology Center (ISTC) Projects

June 19–23, 2005

Moscow and Sarov, Russia

**Oak Ridge National Laboratory**

P.O. Box 2008, Oak Ridge, Tennessee 37831-6166

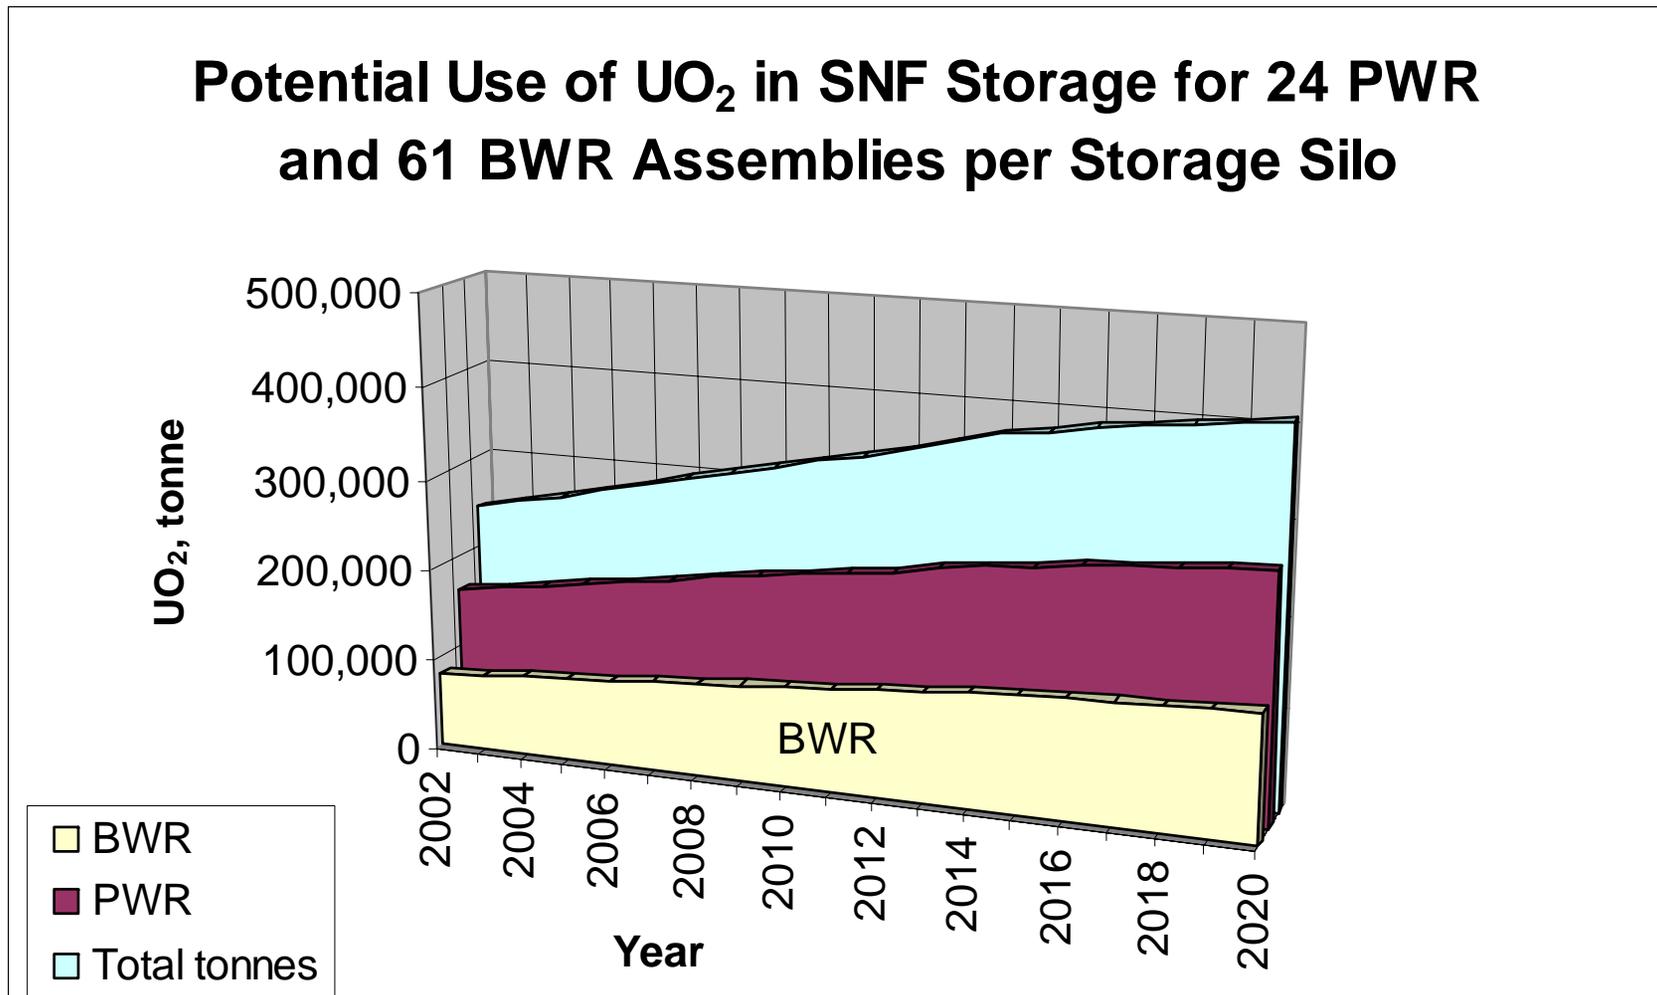

United States of America

E-mail: [dolelr@ornl.gov](mailto:dolelr@ornl.gov)

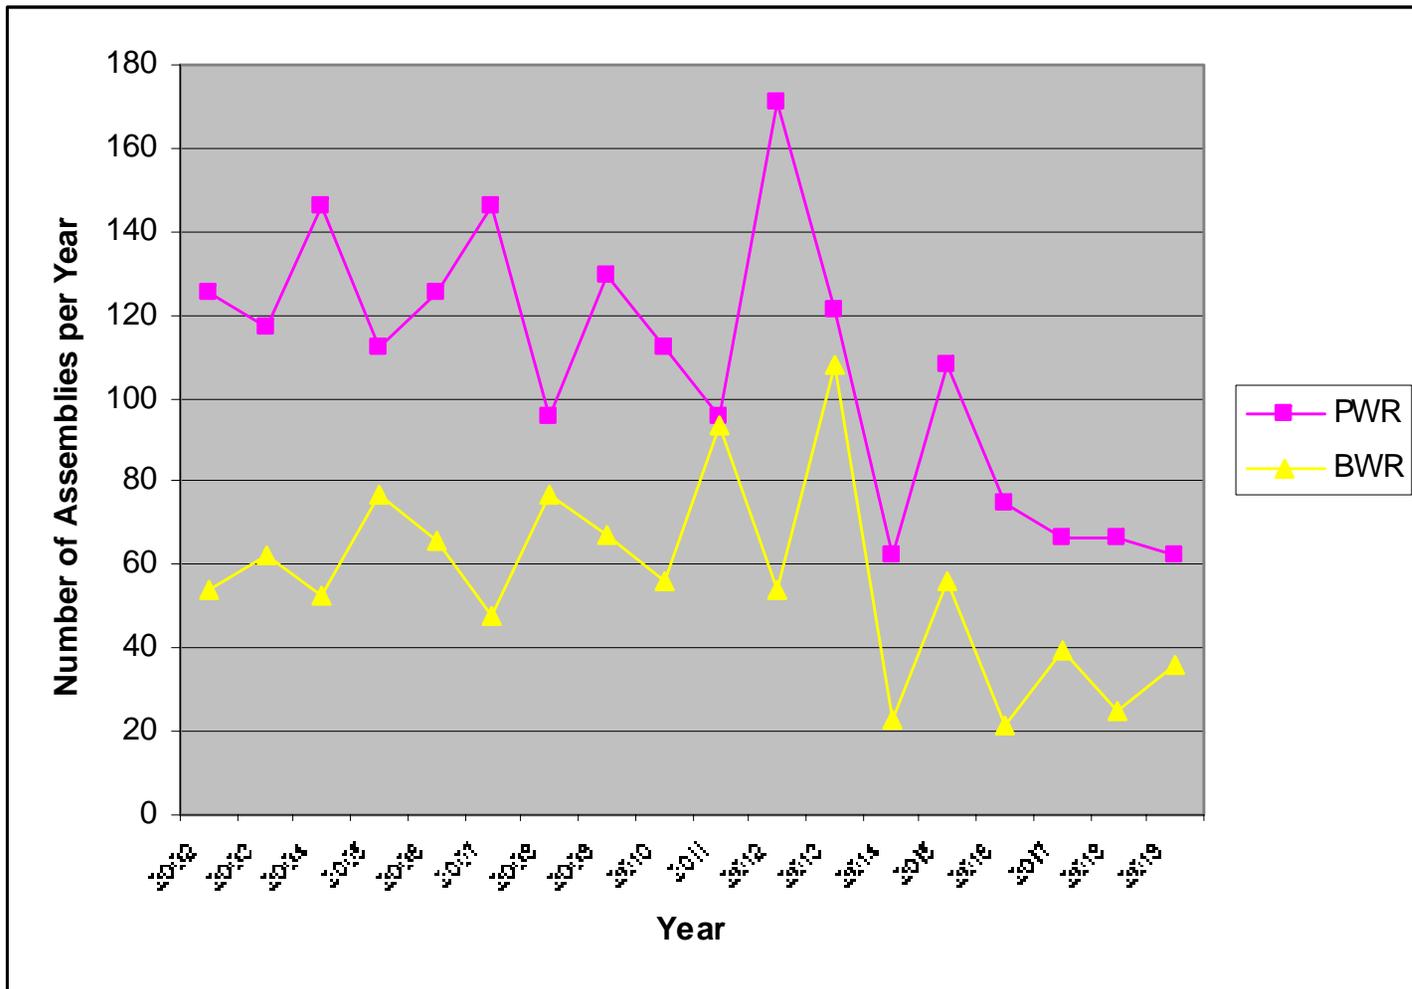

# Outline

- **Background of U.S. and DUCRETE Program**
- **Update laboratory DUAGG exposure testing**
- **Update preconceptual design and costing of DUCRETE cask fabrication**

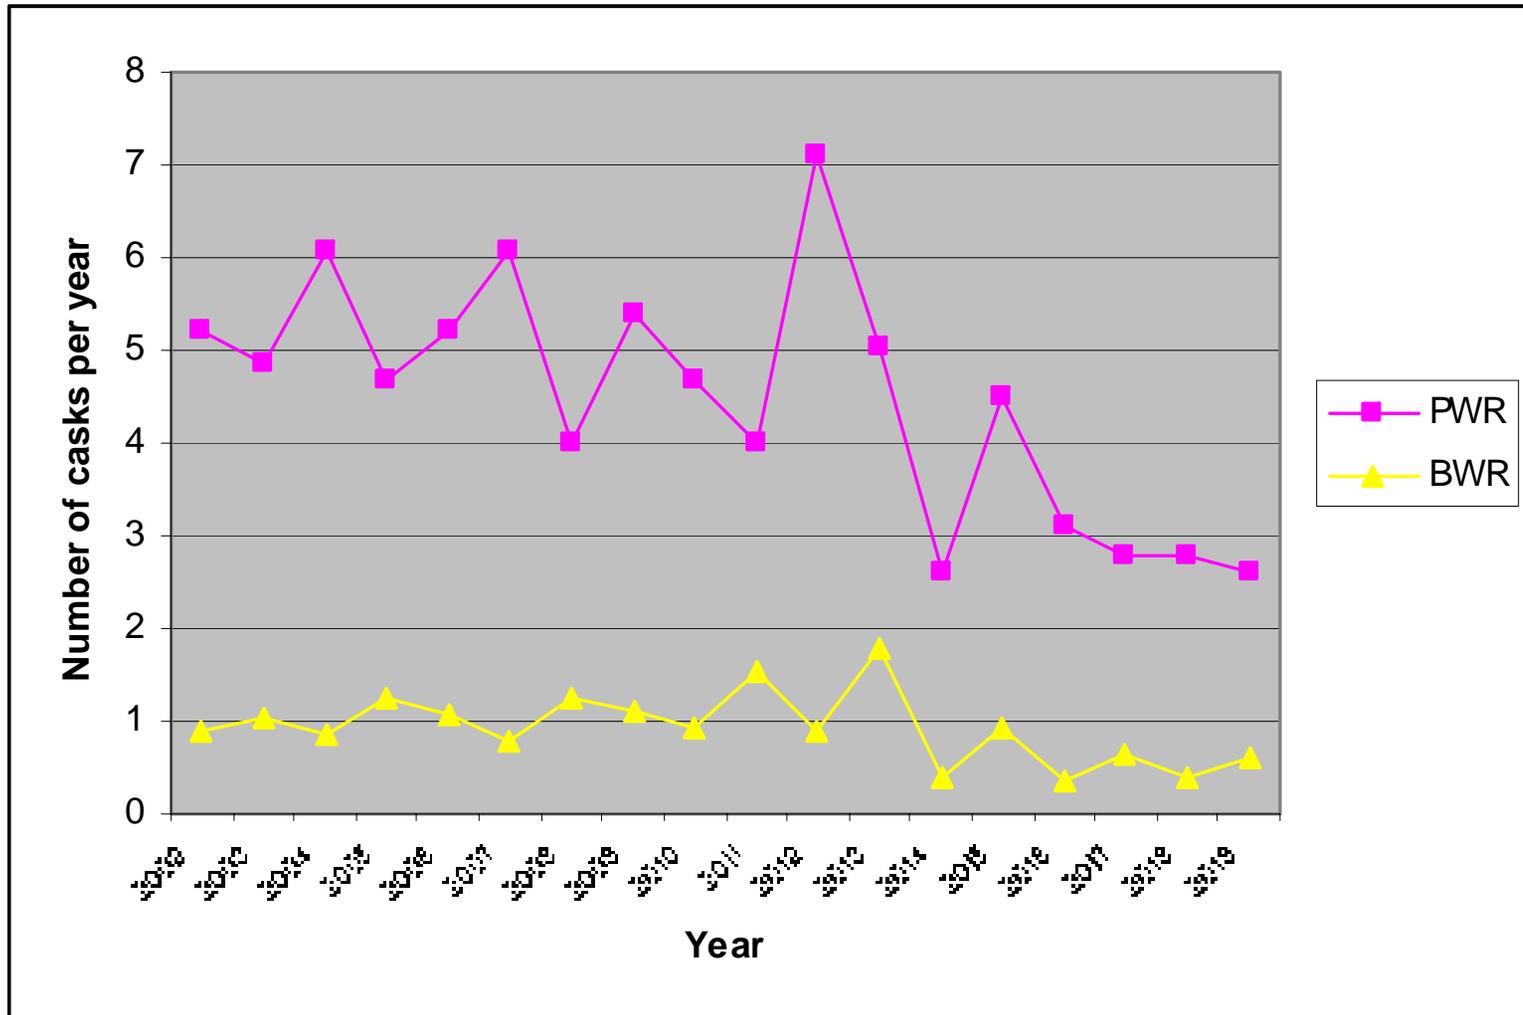

# Consumption in Storage/Transport Casks for projected Commercial SNF

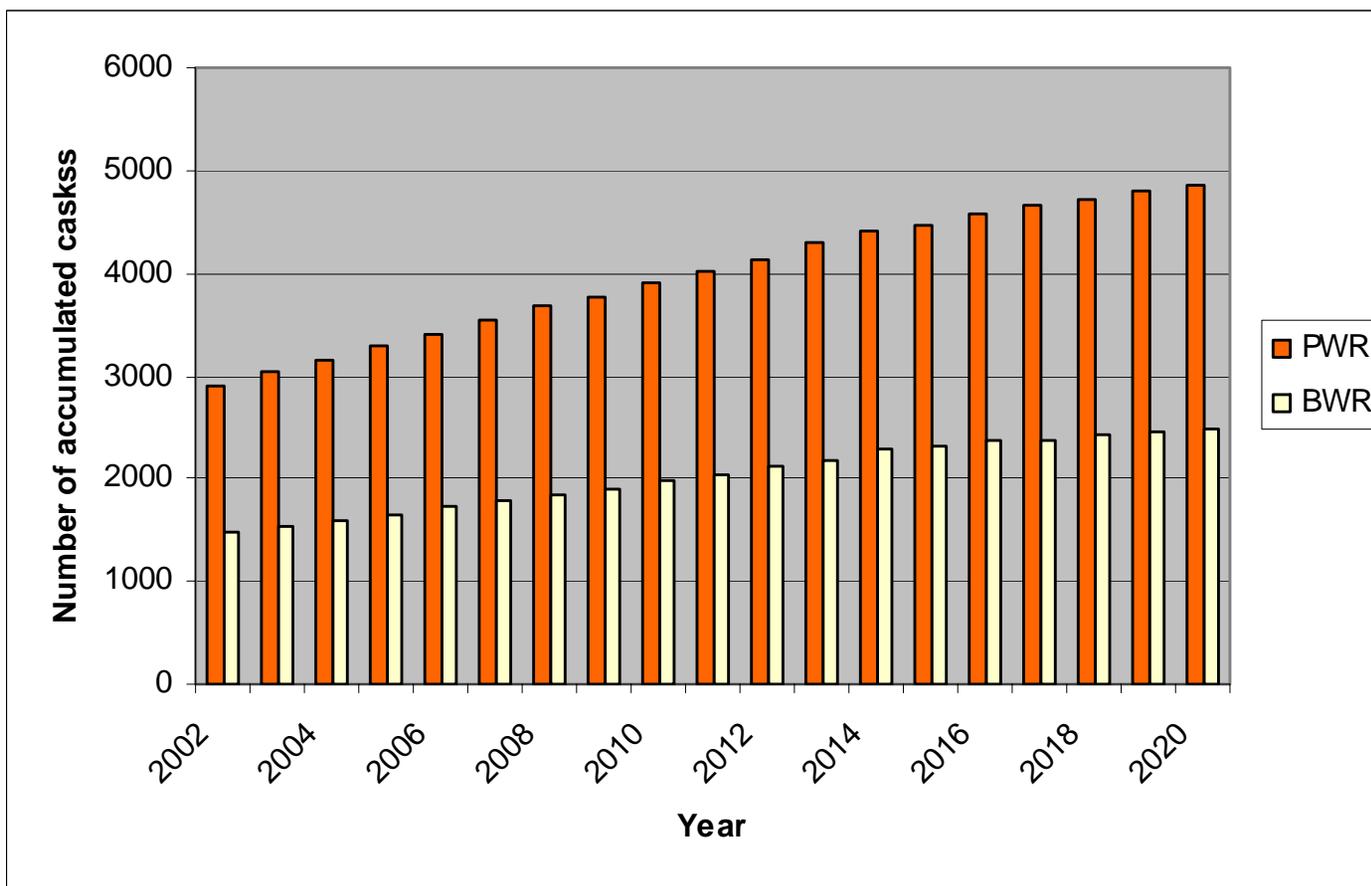

# Yearly Rate of Spent Fuel Assemblies (no inventory included)

# Yearly Rate of Spent Fuel Storage/Transport Casks (no inventory included)

# Hypothetical Number of Casks for the Accumulated PWR and BWR Assemblies (including inventory)

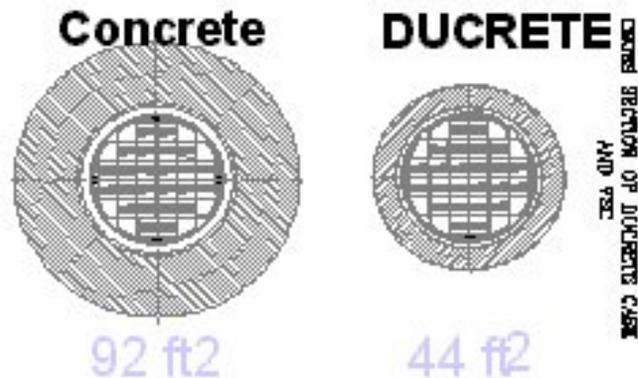

# Design Capacity of the Plant

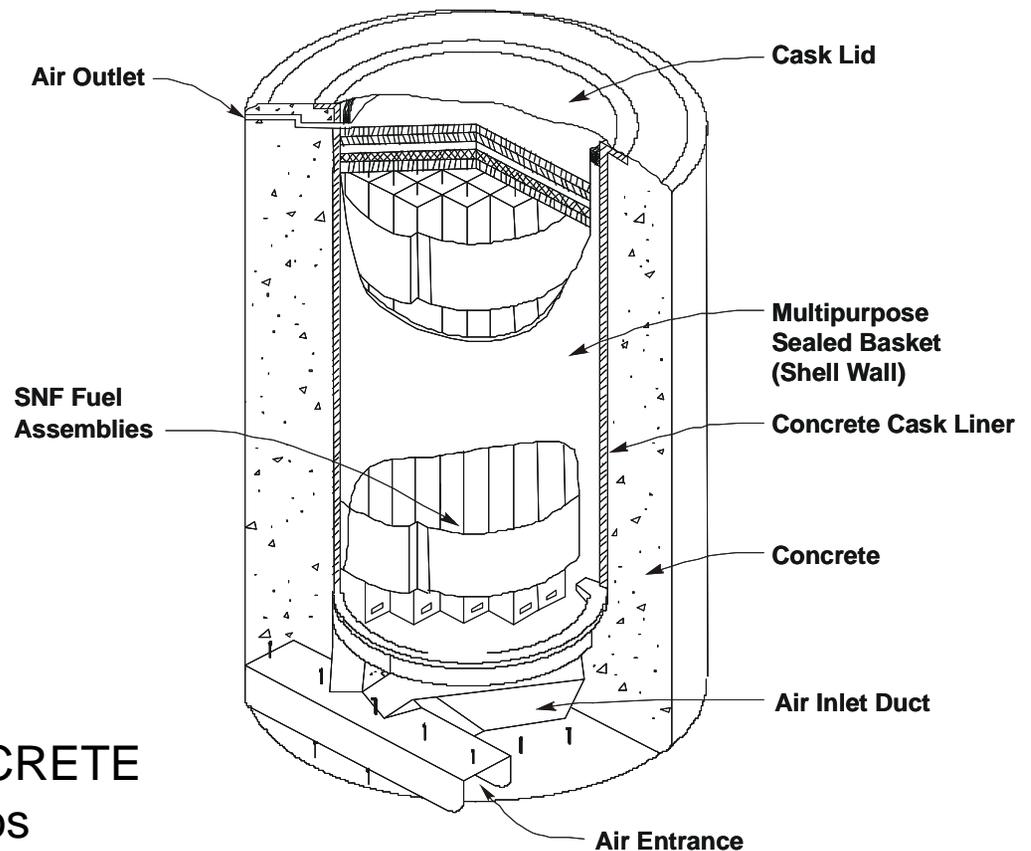

- **Plant produces 50 storage/transport casks per year, operating in one 8-hr shift**
- **Operates for 25 years**
- **Casks will store the equivalent to about 25% the inventory of PWR inventory or could store the equivalent to about 45% of BWR inventory**

# DUCRETE Casks are Considerably Smaller and Lighter than Casks Constructed of Ordinary Concrete

The DUCRETE cask is 35 tons lighter and 100 cm smaller in diameter than casks made from ordinary concrete.

Comparison of conventional and DUCRETE spent-fuel dry storage casks/silos

# Substitute DUCRETE in GNB CONSTOR Cask and Optimize Design

- Reduce size and weight
- Allow higher thermal loads
- Meet technical and economic performance criteria
- Comply with regulatory requirements and standards

# Russian RBMK Spent Fuel Cask with Heavy Concrete

Heavy concrete  
with steel shot  
and barium  
sulfate

GNB CONSTOR test cask  
for RBMK SNF

# RMBK SNF Shipments in Russia

A train carrying a load of spent nuclear fuel from a Ukrainian nuclear power plant arrived at Zheleznogorsk, Krasnoyarsk County

[http://www.bellona.no/en/international/russia/nuke\\_industry/siberia/zheleznogorsk/16331.html](http://www.bellona.no/en/international/russia/nuke_industry/siberia/zheleznogorsk/16331.html)

# DUAGG Briquettes are Stabilized DU Aggregates with Basalt Sintering Agent

Briquettes are pressed, solidified by liquid-phase sintering, crushed, and gap-graded for use in high-strength DUCRETE at 5000 to 6000 psi, (35–42 MPa)

# Composition of DUAGG

<b>Element</b>	<b>wt %</b>
<b>Aluminum</b>	<b>0.61</b>
<b>Copper</b>	<b>0.04</b>
<b>Iron</b>	<b>0.42</b>
<b>Potassium</b>	<b>0.14</b>
<b>Magnesium</b>	<b>0.15</b>
<b>Silicon</b>	<b>2.16</b>
<b>Strontium</b>	<b>0.01</b>
<b>Titanium</b>	<b>1.35</b>
<b>Uranium</b>	<b>93.71</b>
<b>Zirconium</b>	<b>0.85</b>

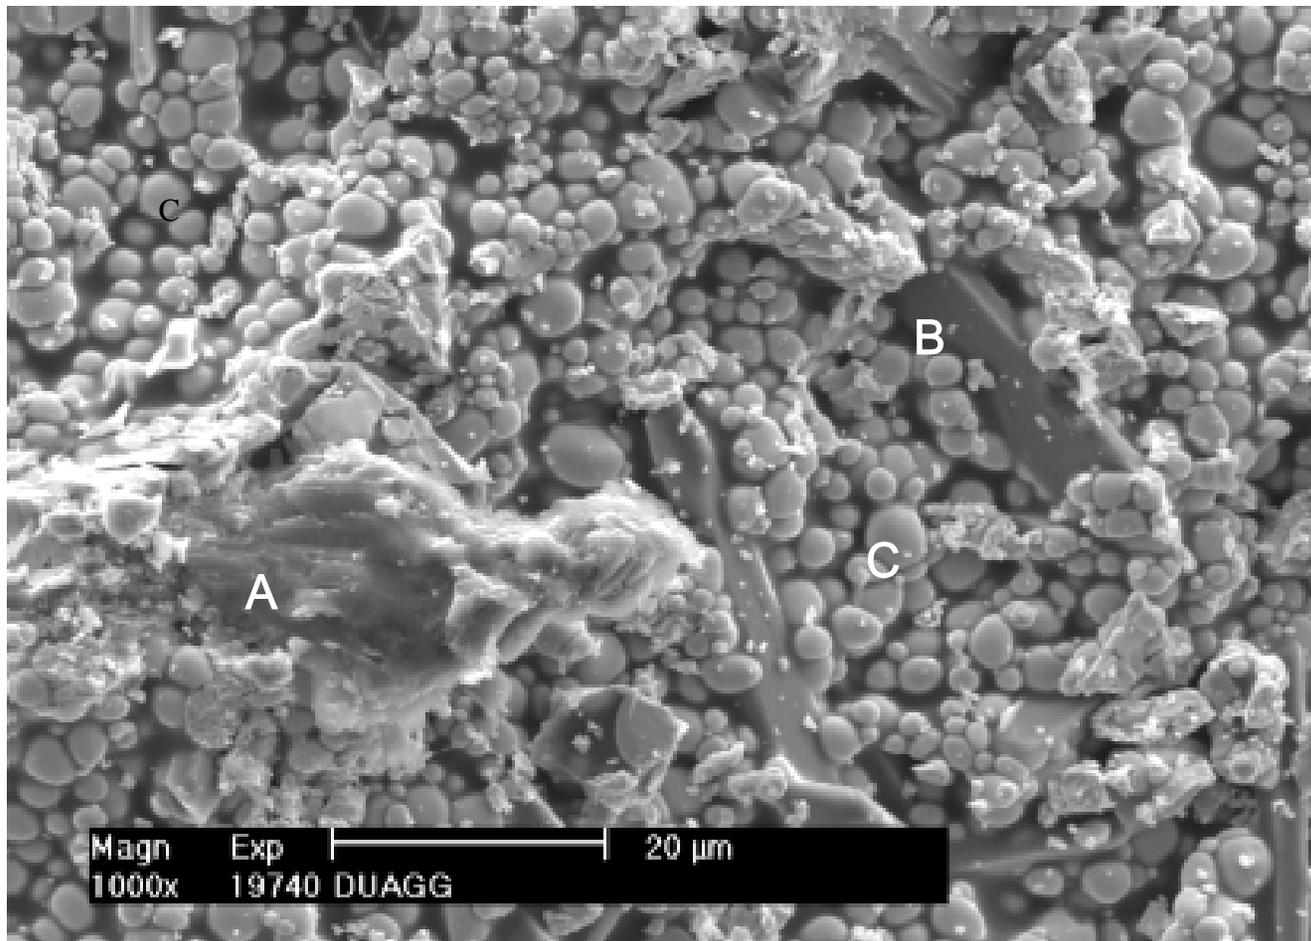

# Current DUAGG Exposure Studies Using ASTM C289-94 Standard Test Method

At a consistent surface-to-liquid ratio of 1:10, the sintered DUAGG samples are exposed to:

- (1) distilled water
- (2) 1 *N* sodium hydroxide standard solution
- (3) saturated water extract of high-alkali cement

The three exposure temperatures and six times are as follows: 25, 66, and 150°C at intervals of 30, 60, 90, 180, 360, and 730 days

# View of DUAGG Before Testing

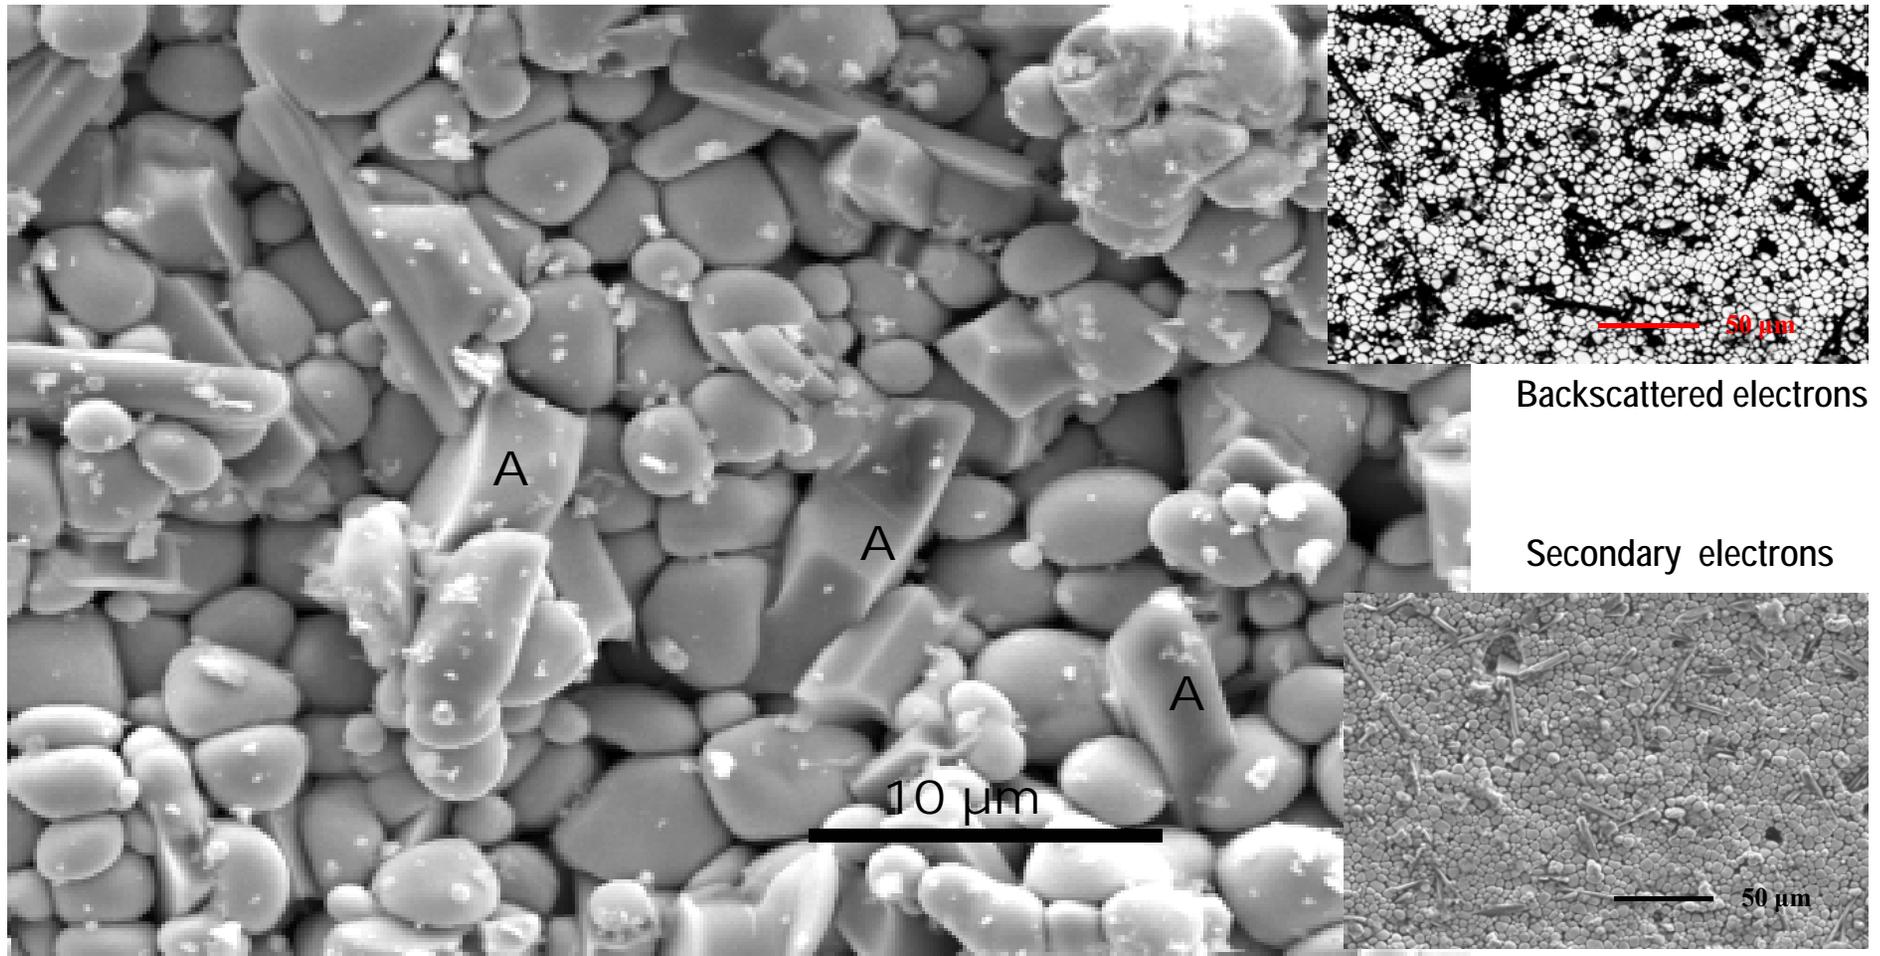

Detail of the surface (secondary electrons)

**Particle A contains Al**

**Particle B contains Ti and some Mg**

**Area C contains  $\text{DUO}_2$  particles surrounded by dark basalt**

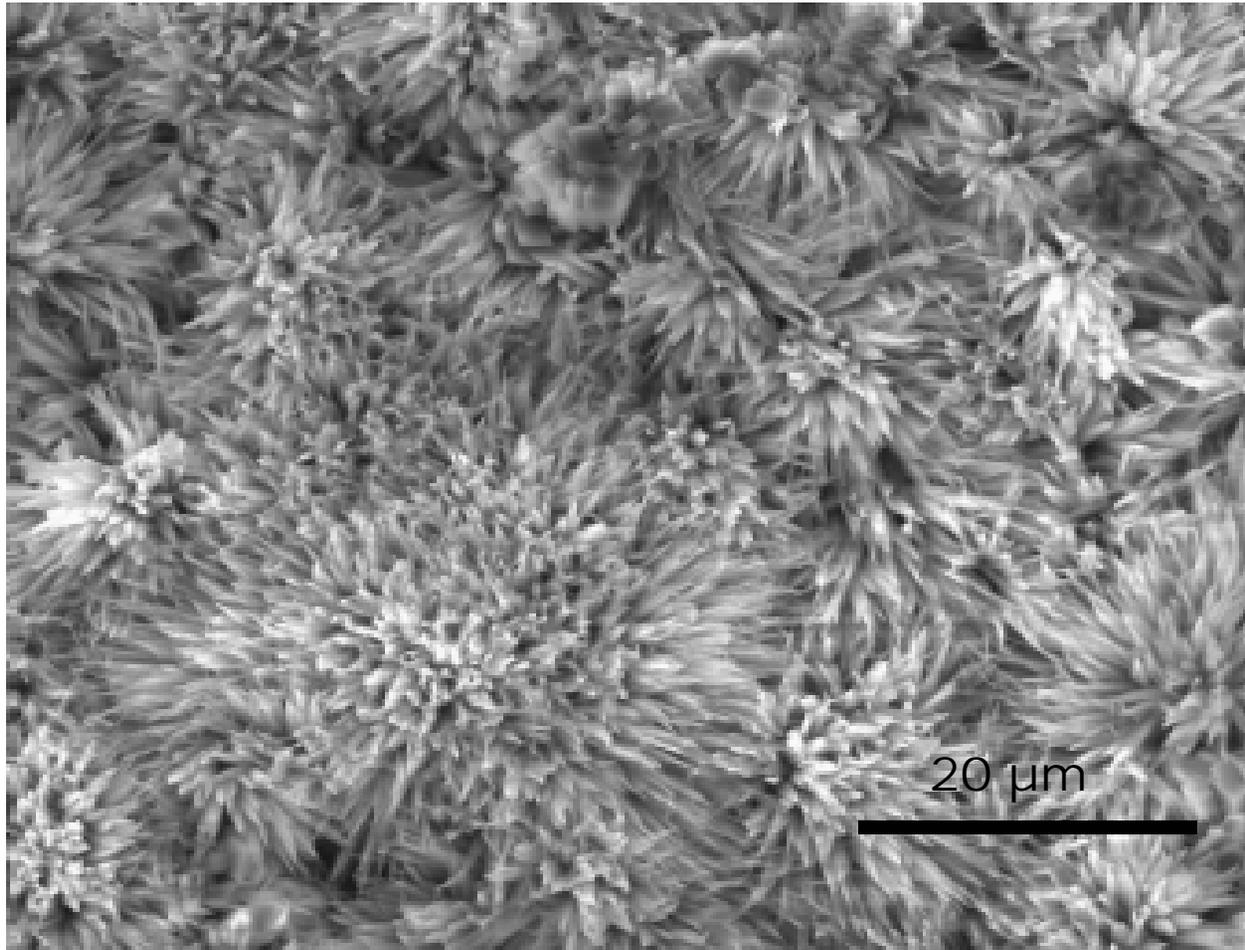

# DUAGG After 6 Months in DI Water

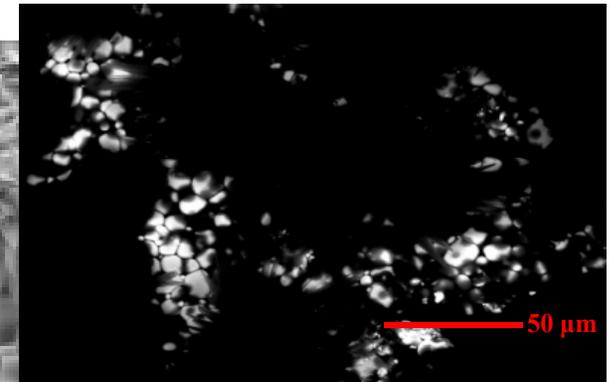

150°C — secondary electrons

Particles A contain Ti and some Mg

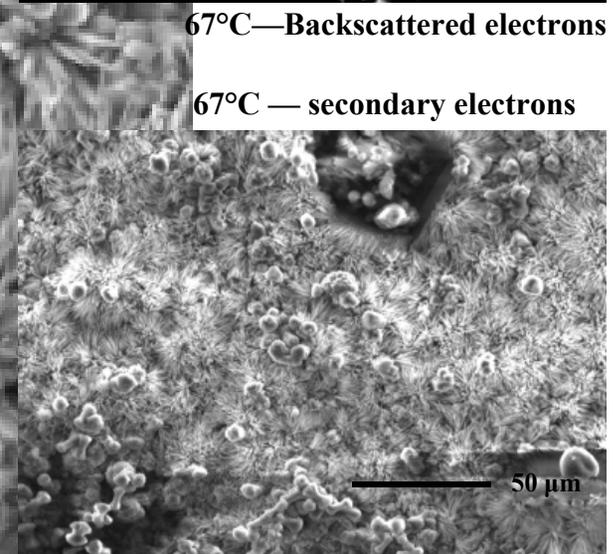

# DUAGG After 6 Months in Cement Pore Solution

67°C — secondary electrons

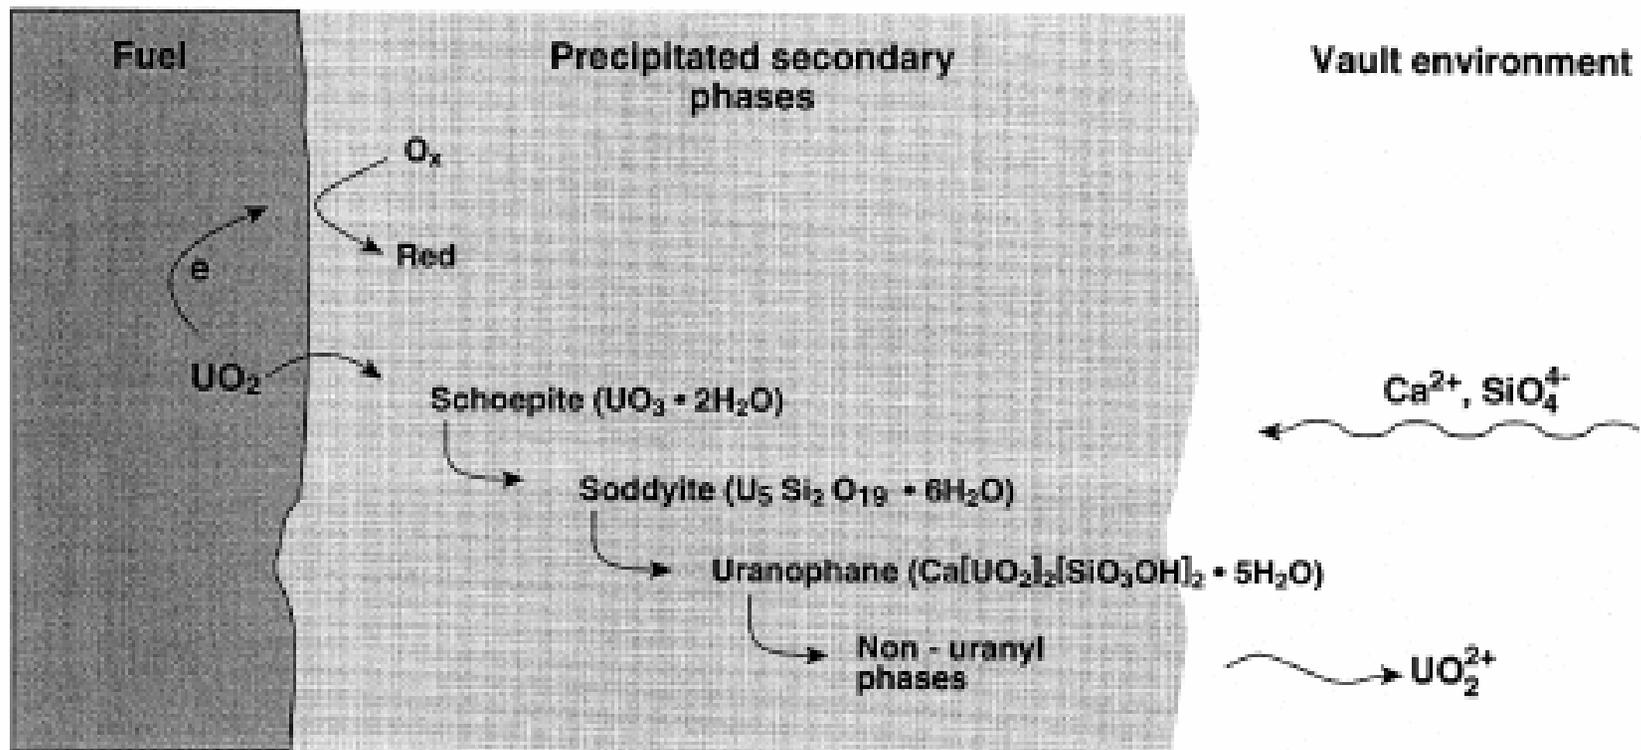

67°C—Backscattered electrons

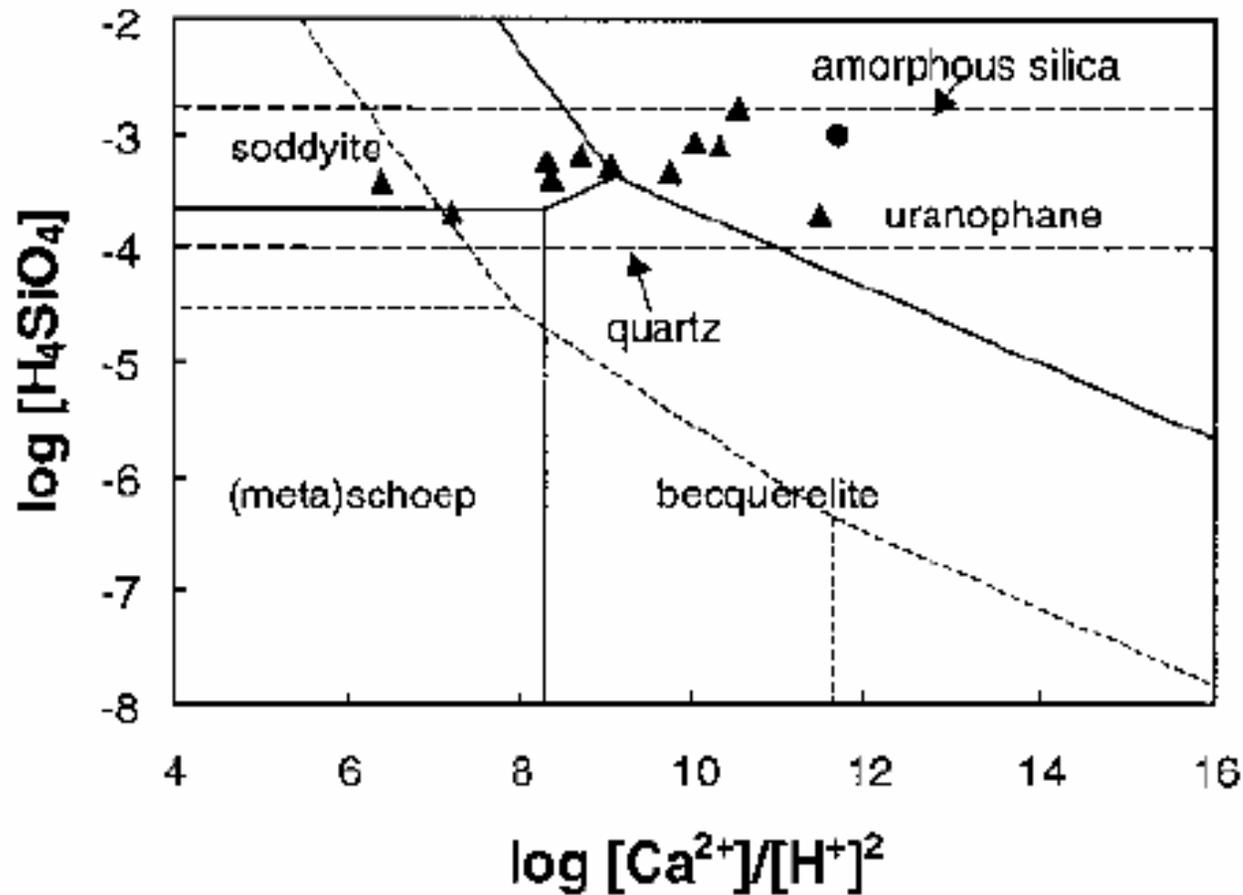

67°C — secondary electrons

Covered by  $\text{CaCO}_3$  and needle-like crystals containing Ca, Si, and some Al

# Silicates Form a Dense Diffusion Layer on the Surface of $\text{UO}_2$ Even under Oxidizing Conditions

# High-Silica Forces Formation of Insoluble Uranium Silicates

# Principal U(VI) Compounds

Values of  $\Delta G_{f,298}^{\circ}$  for the U(VI) minerals used in the construction of Fig. 7 (Chen 1999)

Uranyl phases	Formula	kJoule/mol <sup>a</sup>	kJoule/mol <sup>b</sup>
Metaschoepite	$[(\text{UO}_2)_8\text{O}_2(\text{OH})_{12}] \cdot (\text{H}_2\text{O})_{10}$	-13,092.0	-13,092.0
Becquerelite	$\text{Ca}[(\text{UO}_2)_6\text{O}_4(\text{OH})_6] \cdot (\text{H}_2\text{O})_8$	-10,324.7	-10,305.8
Rutherfordine	$\text{UO}_2\text{CO}_3$	-1,563.0	-1,563.0
Uranocalcarite	$\text{Ca}_2[(\text{UO}_2)_3(\text{CO}_3)(\text{OH})_6] \cdot (\text{H}_2\text{O})_3$	-6,036.7	-6,037.0
Sharpite	$\text{Ca}[(\text{UO}_2)_6(\text{CO}_3)_5(\text{OH})_4] \cdot (\text{H}_2\text{O})_6$	-11,607.6	-11,601.1
Fontanite	$\text{Ca}[(\text{UO}_2)_3(\text{CO}_3)_4] \cdot (\text{H}_2\text{O})_3$	-6,524.7	-6,523.1
Liebigite	$\text{Ca}_2[(\text{UO}_2)(\text{CO}_3)_3] \cdot (\text{H}_2\text{O})_{11}$	-6,446.4	-6,468.6
Haiweeite	$\text{Ca}[(\text{UO}_2)_2(\text{Si}_2\text{O}_5)_3] \cdot (\text{H}_2\text{O})_5$	-9,367.2	-9,431.4
Ursilite	$\text{Ca}_4[(\text{UO}_2)_4(\text{Si}_2\text{O}_5)_5(\text{OH})_6] \cdot (\text{H}_2\text{O})_{15}$	-20,377.4	-20,504.6
Soddyite	$[(\text{UO}_2)_2\text{SiO}_4] \cdot (\text{H}_2\text{O})_2$	-3,653.0	-3,658.0
Uranophane	$\text{Ca}[(\text{UO}_2)(\text{SiO}_3\text{OH})_2] \cdot (\text{H}_2\text{O})_5$	-6,192.3	-6,210.6

<sup>a</sup> Chen 1999 <sup>b</sup> Finch 1997

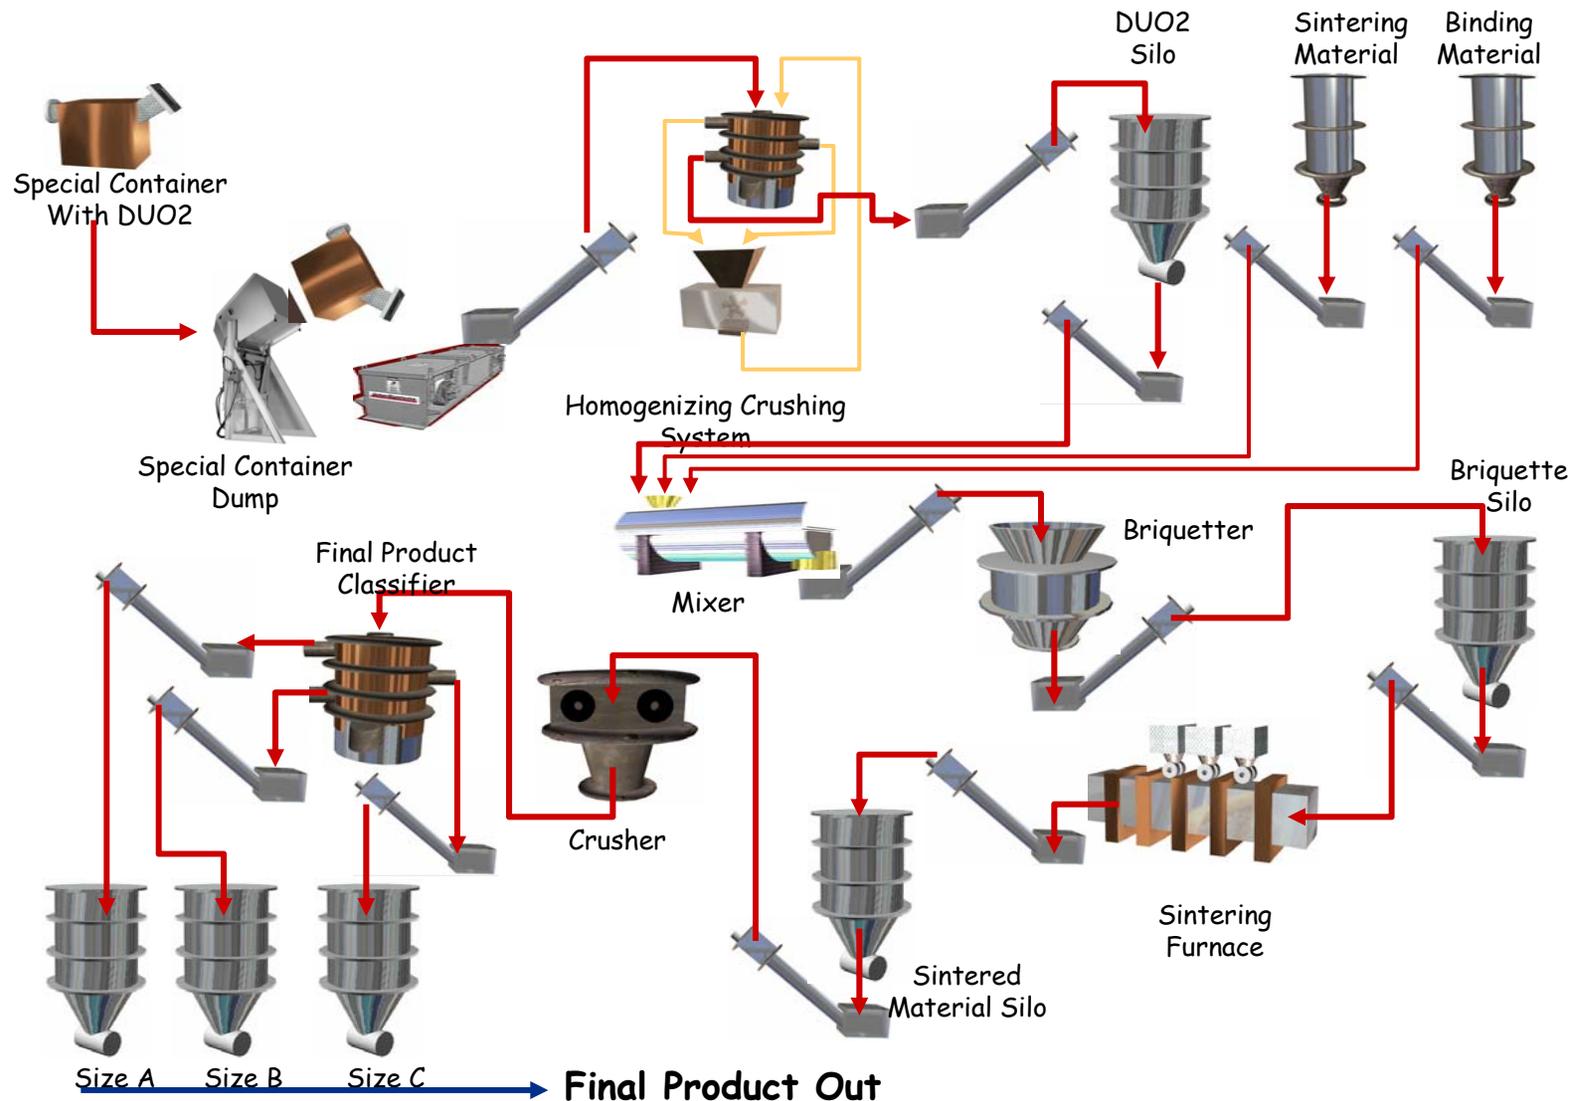

# Conclusions on DUAGG Testing

- **After >24 months of exposure, the release rate of uranium in a cement pore solution is low and shows that DUAGG is superior to pure  $\text{UO}_2$**
- **A protective layer of recrystallization products from the basalt phase of DUAGG cover the surface, slowing the release of uranium**
- **In the cement pore solution, after >24 months of exposure, no deleterious products from the alkali-aggregate reaction were seen**

# Conclusions on DUAGG Testing (continued)

- **Results show that DUAGG can be expected to be stable under the casks' service conditions**
- **We are continuing laboratory experiments to characterize DUAGG/DUCRETE materials and their behavior in SNF cask applications**
- **We are pursuing a collaboration with the Russians to design and demonstrate the next generation of SNF transport and storage casks**

# Conceptual Fabrication of DUAGG

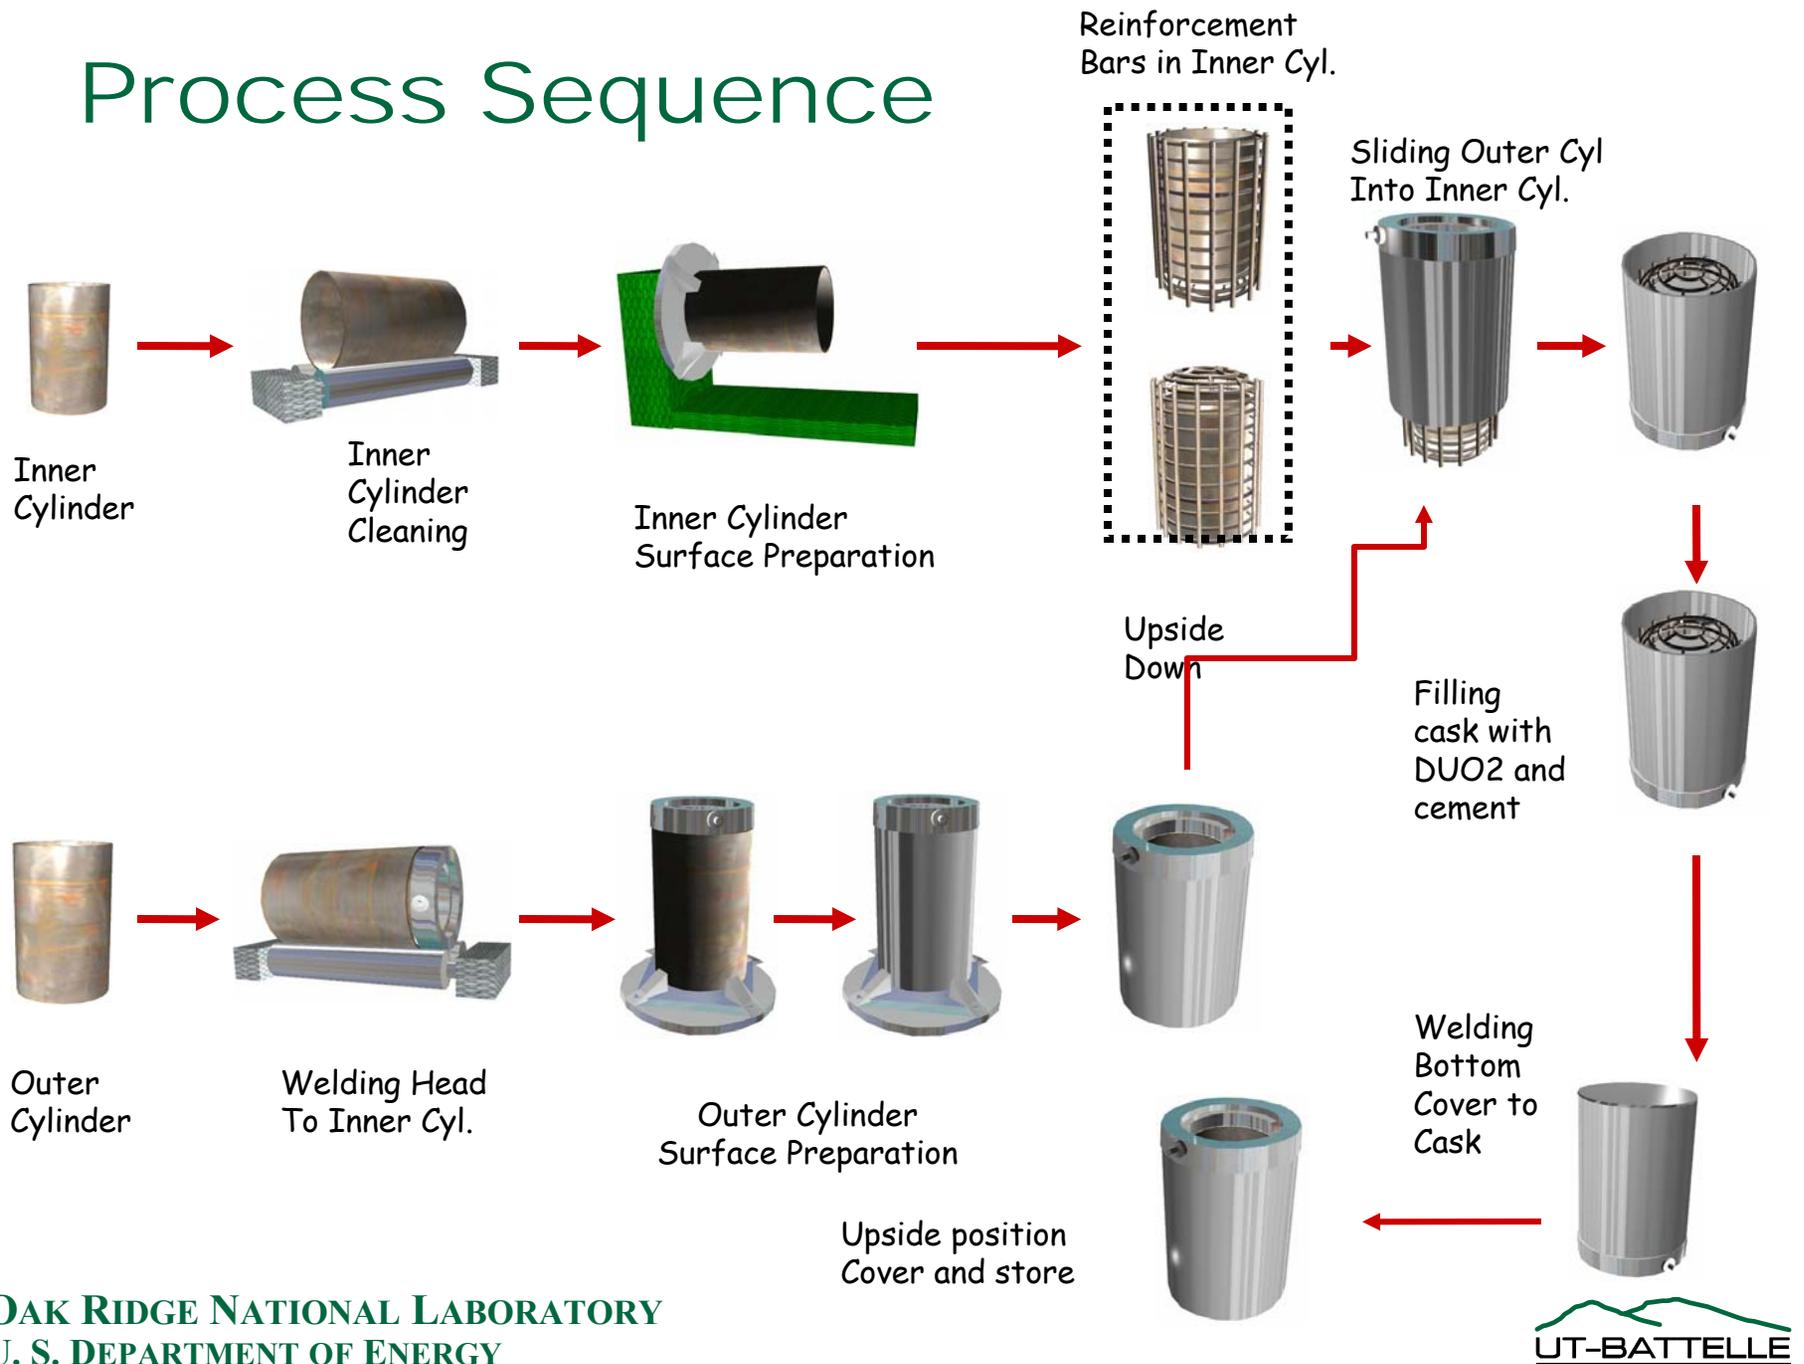

# Conclusions of DUAGG Price Study

- **Labor is primary cost**
  - Reduce by privatization
  - Reduce by integrating with  $\text{DUF}_6$  conversion
  - Reduce labor intensive processing steps
- **Cost of Producing DUAGG, \$138,000/cask (62 tons DUAGG per cask)**

# Preconception Cask Design and Fabrication Cost Study

**CONSTOR Cask Fabrication used as Baseline**

# Process Sequence

# Some Fabrication Steps

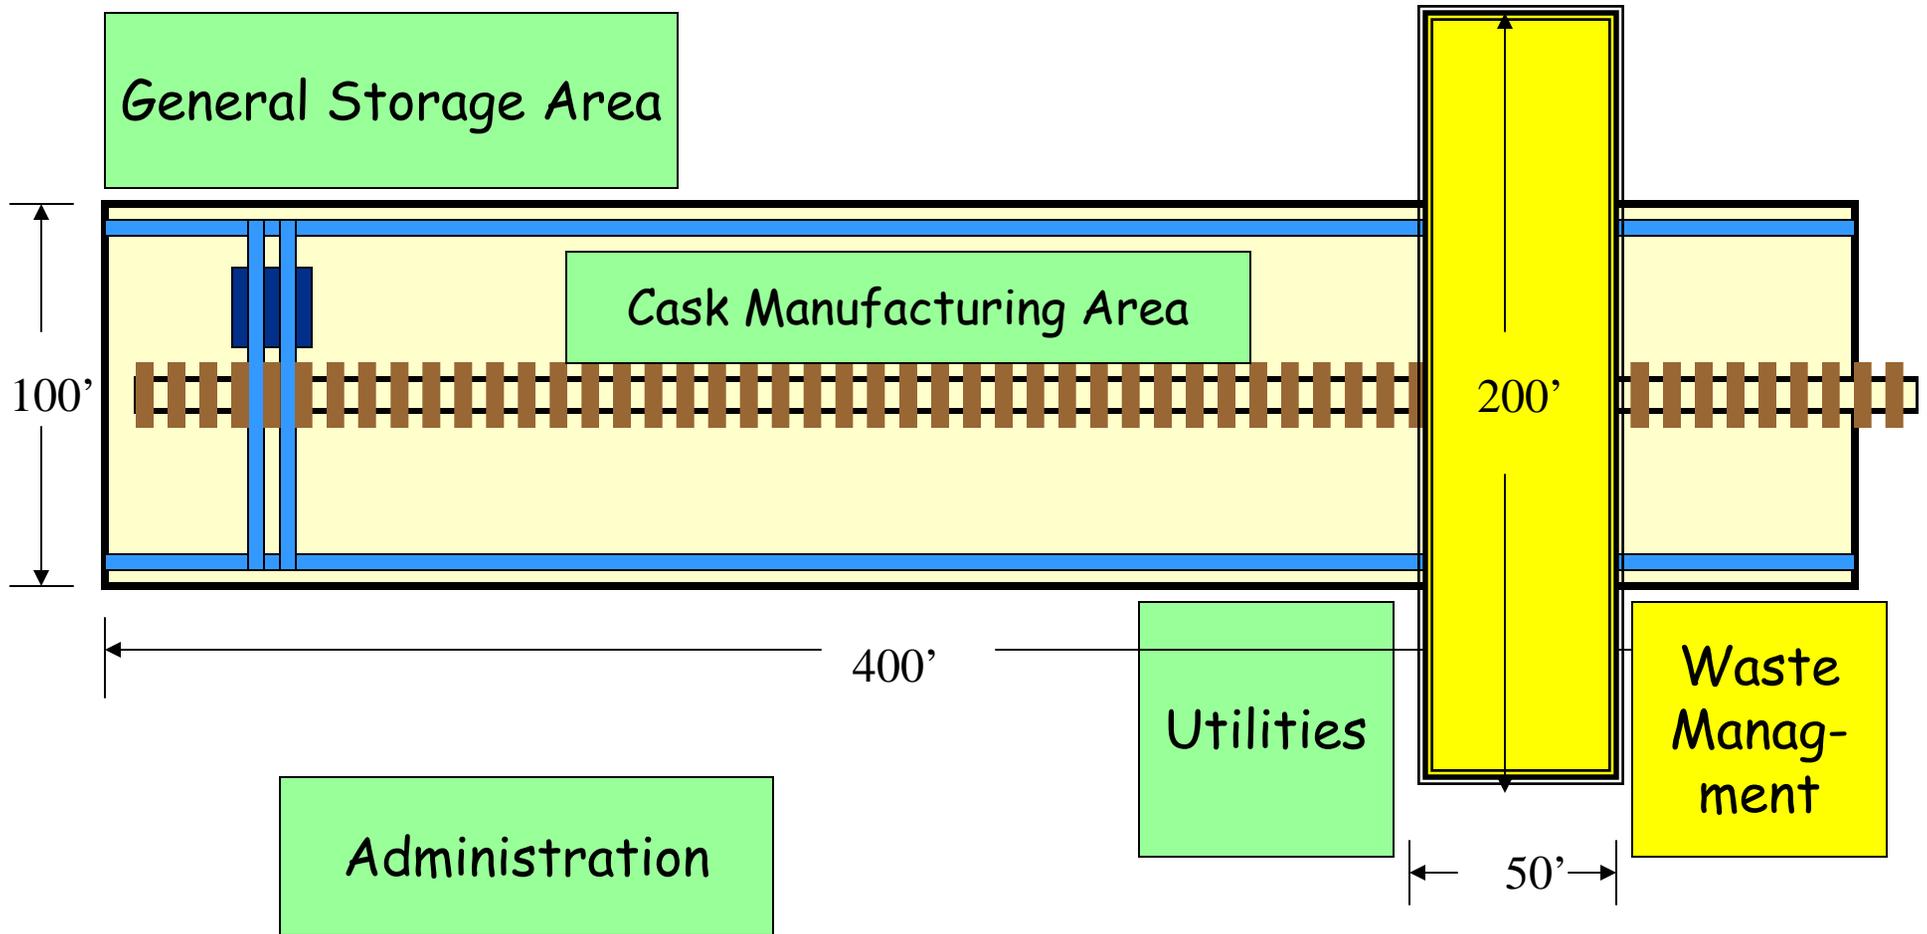

**OAK RIDGE NATIONAL LABORATORY**  
**U. S. DEPARTMENT OF ENERGY**

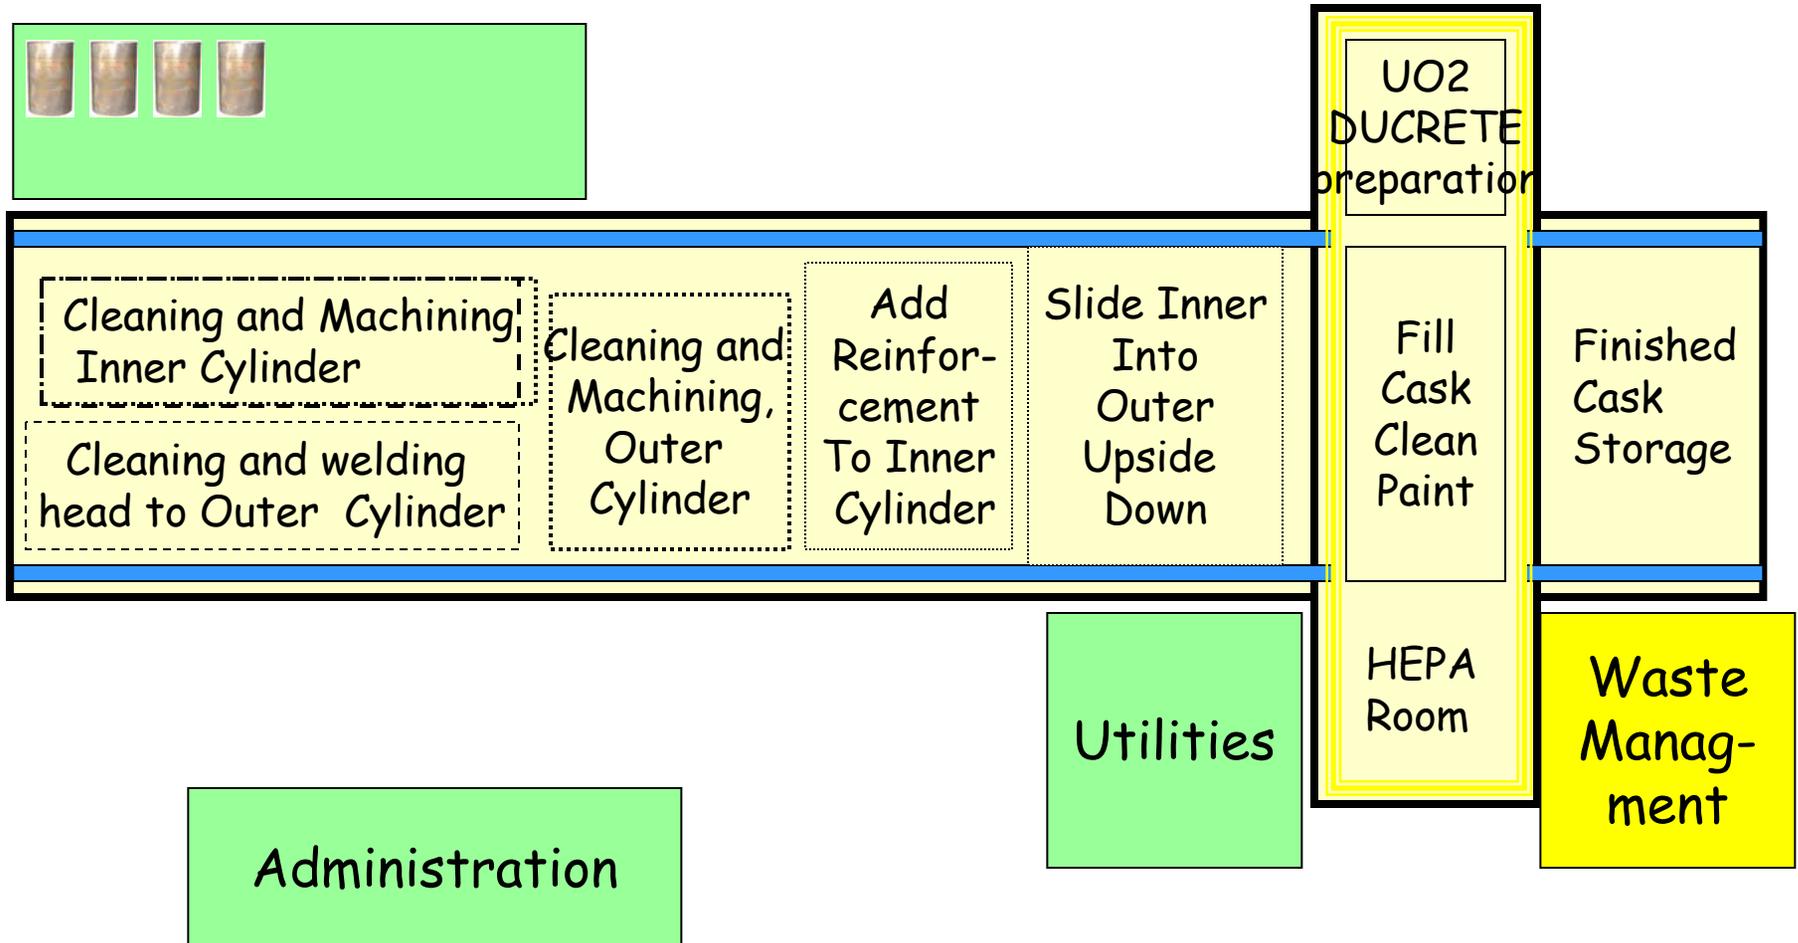

# Assumptions

- **Plant can manufacture 50 casks per year working one shift per day**
- **The manufacturing plant receives DUAGG, cement, and steel pre-fabricated parts to make the casks**
- **It takes three days (1 shift) to make a cask**
- **The plant will work 5 days a week**

# Surface Area Required

# Process Stage Distribution

# Capital Cost Components

- Civil/site preparation
- Utilities building services
- Process equipment
- Land and buildings
- Special process services
- Engineering
- Piping
- Electrical
- Spare parts
- Management
- Shipping
- Safety system
- Installation labor

# Capital Cost

- Capital cost has been estimated for a plant capable of manufacturing 50 casks per year (in one 8-hr shift)
- The estimated capital cost for this plant is \$17.1M

# Operation Cost Calculation

- Labor
- Cement
- DUAGG
- Utilities
- Waste Management
- Administration
- Inner cylinders
- Outer cylinders
- Bottom covers
- Cask primary lid
- Cask secondary lid
- Paint

# Labor Cost for the Baseline Case of 50 Casks Per Year

- Operators

Labor cost for operators : \$70/hr

For production of 50 casks :  $13 * 2080 \text{ hr/yr} * \$70/\text{hr}$   
: \$1,900K/yr

- Administration

Secretary :  $1 * 2080 \text{ hr/yr} * \$30/\text{hr} = \$ 62.4\text{K/yr}$

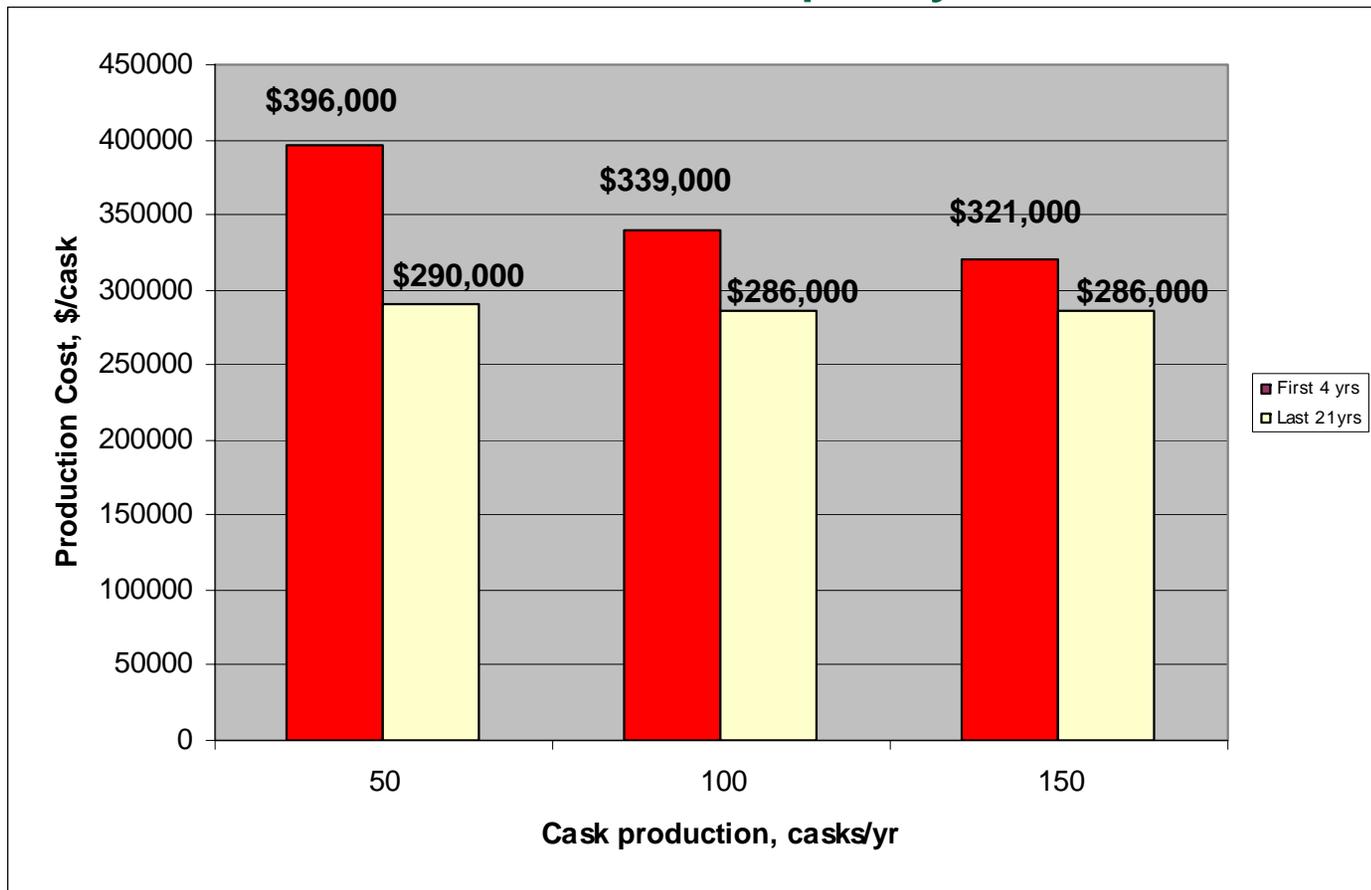

Shift superintendent :  $1 * 2080 \text{ hr/yr} * \$80/\text{hr} = \$166.4\text{K/yr}$

General Manager :  $1 * 2080 \text{ hr/yr} * \$90/\text{hr} = \$187.2\text{K/yr}$

**Total Annual Labor Cost: \$2,316K/yr**

# Production Cost per Storage/Transport Cask

Analysis was made for three cases:  
50, 100, and 150 casks per year

Assumes:  
Capital Recovery  
Factor: 25%

# US Questions

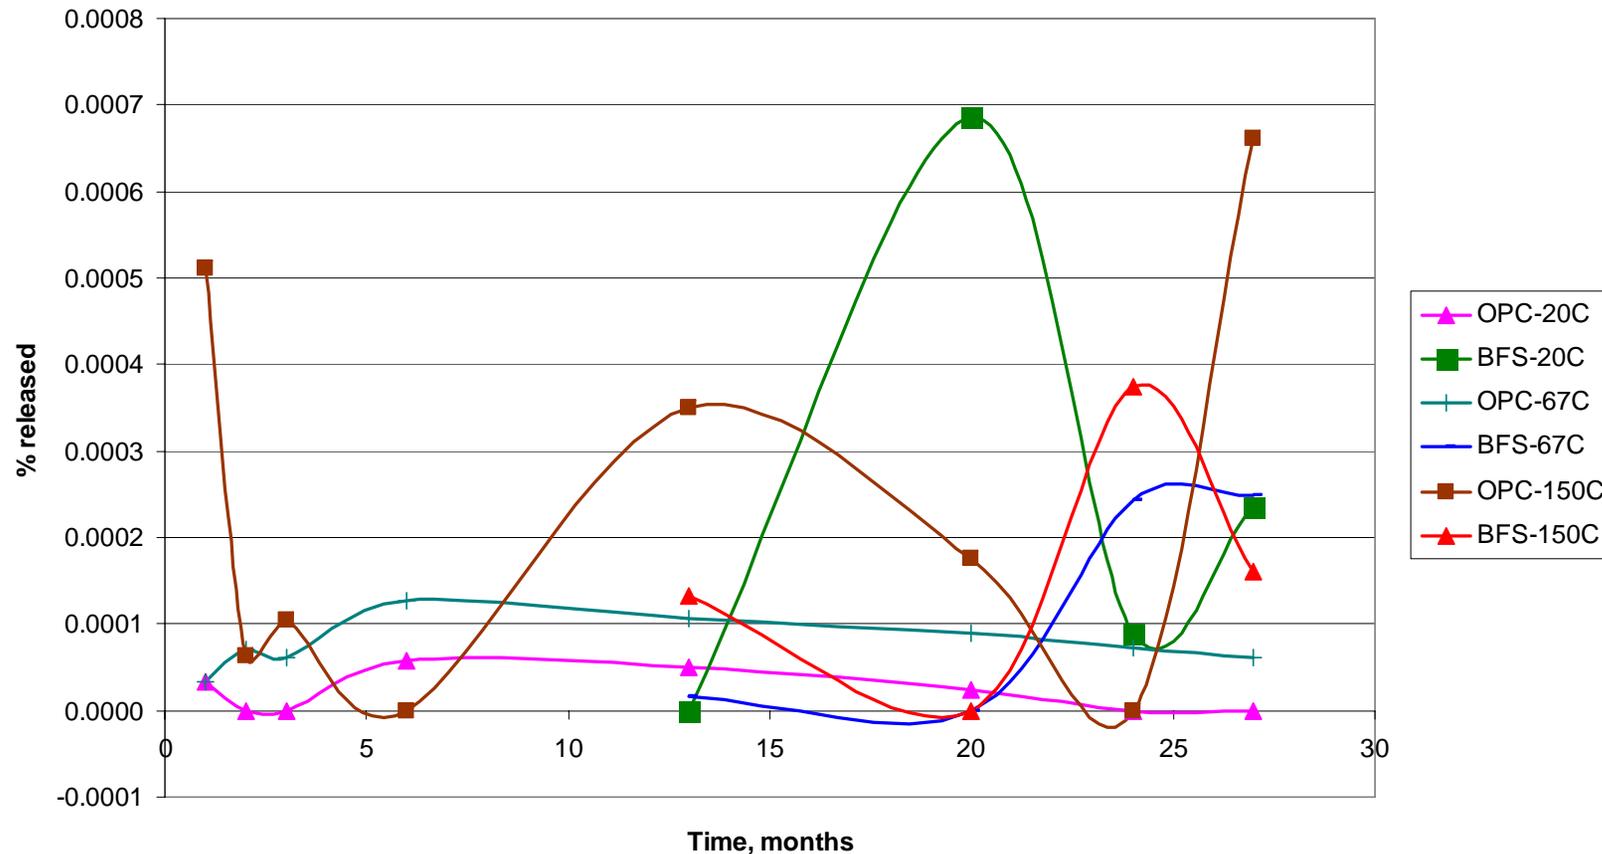

- **What would such a business analysis look like for Russian manufacturing facilities in the context of Russian and international market analyses?**
- **What, if any, are Russia's long-range plans for the implementation of these technologies**
