The Manufacturing Demonstration Facility (MDF), established in 2012, is the Department of Energy’s only designated user facility focused on performing early-stage research and development to improve the energy and material efficiency, productivity, and competitiveness of American manufacturers. Research focuses on manufacturing analysis and simulation, composites and polymer systems, metal powder systems, metrology and characterization, machine tooling, large-scale metal systems, and robotics and automation.

The MDF is a 110,000 sq. ft. facility housing integrated capabilities that drive the development of new materials, software, and systems for advanced manufacturing. From binder jetting to 3D tomography to in situ monitoring, the MDF leverages a range of equipment and expertise designed to deliver results that generate energy efficiency improvements in the manufacturing sector, efficiently utilize abundant and available domestic energy resources, and support the production of clean energy products with benefits extending across the nation’s economy.

### Revitalizing US Manufacturing

**Materials**
Developing metallic alloys and polymers designed for additive manufacturing, creating hybrid materials, and understanding the role of feedstocks.

**Software**
Integrating in situ monitoring, machine learning, and data analysis and deploying rapid qualification tools.

**Metrology**
Implementing physics-based simulations, 3D tomography, in situ nondestructive evaluation, and post-processing metrology techniques.

**Systems**
Developing pick-and-place hybrid systems and optimizing advanced materials.
DOE’s MDF

The Manufacturing Demonstration Facility is DOE’s only designated user facility focused on advanced manufacturing research and development.

Working with ORNL

ORNL works with more than 100 companies yearly for technology advancement and commercialization. More than 20 start-ups have been formed based on ORNL-developed technologies over the past 5 years. Under the MDF Technology Collaborations Program, industry can leverage world-leading capabilities and expertise in short-term collaborative projects approved by DOE. Academia, national laboratories, government agencies, and nongovernmental organizations may also access the facility through a variety of user and collaborative agreements. For more information on how to work with ORNL, visit www.ornl.gov/partnerships.
