Project Management

- 2013-present SEQUOIA lead instrument scientist. The lead instrument scientist or point-of-contact has half of the local contact responsibilities for the instrument. The lead instrument scientist also serves to manage the operation, upgrades, and scientific mission of the instrument. The SEQUOIA instrument hosts approximately 50 experiments per year and has around 25 peer-reviewed publications each year.
- 2017-2018 SEQUOIA vacuum upgrade project. The SEQUOIA vacuum upgrade project was performed to improve the vacuum control system at the instrument as well as provide pumping redundancy to the vacuum system. The upgrade project also addressed safety issues which were present in the original vacuum control system.
- 2016-2020 14 Tesla vertical field cryomagnet for neutron scattering. This project oversaw the design, acquisition, testing and installation of a 14 Tesla vertical field split-coil cryomagnet for use in neutron scattering measurements at the Spallation Neutron Source. The project includes the acquisition of a He-3 and dilution refrigerator sample environment.

- 2011 ARCS radial collimator project – The ARCS radial collimator project oversaw the design, procurement, acquisition, installation and testing of the ARCS radial collimator. This collimator has allowed for more complicated sample environments to be used at the ARCS chopper spectrometer without significant background scattering.
