Collect and supervise the collection of postirradiation examination data to better understand nuclear fuel performance, and the design of irradiation tests to better inform fuel performance. Current studies include evaluating irradiation effects on nuclear fuel performance on a variety of different fuel types for different reactors. Specifically, examination on fuel samples from the MiniFuel irradiation vehicle, that allows for rapid screening and evaluation of novel fuel concepts, and examinations of commercial accident tolerant (ATF) and LWR high burnup fuel.

Research and Development Engineer, **September 2010 to May 2019**
