---

<b>Profile</b>	I am a passionate mechanical engineer with fluid mechanics and heat transfer expertise. My specialty is in verification, validation, and uncertainty quantification of computational models with crossover into optimization, surrogate modeling, and experimental fluid mechanics.																
<b>Experience</b>	<table><tr><td><b>Oak Ridge National Laboratory</b> <i>Associate Nuclear Fluid Mechanics Engineer</i></td><td>Oak Ridge, TN 2023-Present</td></tr><tr><td><ul style="list-style-type: none"><li>Support Materials Plasma Exposure Experiment using analytic and computational modeling of radio frequency equipment and high heat flux vacuum vessel components</li><li>Verify peridynamic simulations of tungsten divertor components for fusion reactors with finite element analysis</li></ul></td><td></td></tr><tr><td><i>Application Engineer - Computational Fluid Dynamics</i></td><td>2019-2023</td></tr><tr><td><ul style="list-style-type: none"><li>Support development of 2 MW target for the Spallation Neutron Source through computational modeling and experimentation on gas injection strategies</li><li>Designed and optimized Transformational Challenge Reactor (TCR) fuel form coolant channels</li><li>Supported Materials Plasma Exposure eXperiment (MPEX) using analytic and computational modeling of radio frequency equipment and high heat flux vacuum vessel components</li><li>Designed mercury check filter for helium venting of Spallation Neutron Source mercury loop</li></ul></td><td></td></tr><tr><td><i>Post-Masters Fluids Engineer</i></td><td>2018-2019</td></tr><tr><td><ul style="list-style-type: none"><li>Supported development of 2 MW target for the Spallation Neutron Source through computational modeling and experimentation on gas injection strategies</li><li>Conducted multiphase flow experiments of gas-water and gas-mercury systems</li><li>Automated image analysis of gas bubble distribution and wall coverage</li><li>Captured data using high-speed videography and particle image velocimetry (PIV)</li><li>Assisted design of gas phase separator with computational fluid dynamics simulations</li></ul></td><td></td></tr><tr><td><b>Computational Fluid Dynamics and Propulsion Laboratory</b> <i>Graduate Research Assistant</i></td><td>Fort Collins, CO 2016-2018</td></tr><tr><td><ul style="list-style-type: none"><li>Developed novel surrogate modeling tool in MATLAB for uncertainty quantification</li><li>Conducted detailed simulations of various aerodynamic bodies</li><li>Automated data-handling processes through Bash shell-scripting in Linux</li><li>Teaching assistant for undergraduate numerical methods course</li></ul></td><td></td></tr></table>	<b>Oak Ridge National Laboratory</b> <i>Associate Nuclear Fluid Mechanics Engineer</i>	Oak Ridge, TN 2023-Present	<ul style="list-style-type: none"><li>Support Materials Plasma Exposure Experiment using analytic and computational modeling of radio frequency equipment and high heat flux vacuum vessel components</li><li>Verify peridynamic simulations of tungsten divertor components for fusion reactors with finite element analysis</li></ul>		<i>Application Engineer - Computational Fluid Dynamics</i>	2019-2023	<ul style="list-style-type: none"><li>Support development of 2 MW target for the Spallation Neutron Source through computational modeling and experimentation on gas injection strategies</li><li>Designed and optimized Transformational Challenge Reactor (TCR) fuel form coolant channels</li><li>Supported Materials Plasma Exposure eXperiment (MPEX) using analytic and computational modeling of radio frequency equipment and high heat flux vacuum vessel components</li><li>Designed mercury check filter for helium venting of Spallation Neutron Source mercury loop</li></ul>		<i>Post-Masters Fluids Engineer</i>	2018-2019	<ul style="list-style-type: none"><li>Supported development of 2 MW target for the Spallation Neutron Source through computational modeling and experimentation on gas injection strategies</li><li>Conducted multiphase flow experiments of gas-water and gas-mercury systems</li><li>Automated image analysis of gas bubble distribution and wall coverage</li><li>Captured data using high-speed videography and particle image velocimetry (PIV)</li><li>Assisted design of gas phase separator with computational fluid dynamics simulations</li></ul>		<b>Computational Fluid Dynamics and Propulsion Laboratory</b> <i>Graduate Research Assistant</i>	Fort Collins, CO 2016-2018	<ul style="list-style-type: none"><li>Developed novel surrogate modeling tool in MATLAB for uncertainty quantification</li><li>Conducted detailed simulations of various aerodynamic bodies</li><li>Automated data-handling processes through Bash shell-scripting in Linux</li><li>Teaching assistant for undergraduate numerical methods course</li></ul>	
<b>Oak Ridge National Laboratory</b> <i>Associate Nuclear Fluid Mechanics Engineer</i>	Oak Ridge, TN 2023-Present																
<ul style="list-style-type: none"><li>Support Materials Plasma Exposure Experiment using analytic and computational modeling of radio frequency equipment and high heat flux vacuum vessel components</li><li>Verify peridynamic simulations of tungsten divertor components for fusion reactors with finite element analysis</li></ul>																	
<i>Application Engineer - Computational Fluid Dynamics</i>	2019-2023																
<ul style="list-style-type: none"><li>Support development of 2 MW target for the Spallation Neutron Source through computational modeling and experimentation on gas injection strategies</li><li>Designed and optimized Transformational Challenge Reactor (TCR) fuel form coolant channels</li><li>Supported Materials Plasma Exposure eXperiment (MPEX) using analytic and computational modeling of radio frequency equipment and high heat flux vacuum vessel components</li><li>Designed mercury check filter for helium venting of Spallation Neutron Source mercury loop</li></ul>																	
<i>Post-Masters Fluids Engineer</i>	2018-2019																
<ul style="list-style-type: none"><li>Supported development of 2 MW target for the Spallation Neutron Source through computational modeling and experimentation on gas injection strategies</li><li>Conducted multiphase flow experiments of gas-water and gas-mercury systems</li><li>Automated image analysis of gas bubble distribution and wall coverage</li><li>Captured data using high-speed videography and particle image velocimetry (PIV)</li><li>Assisted design of gas phase separator with computational fluid dynamics simulations</li></ul>																	
<b>Computational Fluid Dynamics and Propulsion Laboratory</b> <i>Graduate Research Assistant</i>	Fort Collins, CO 2016-2018																
<ul style="list-style-type: none"><li>Developed novel surrogate modeling tool in MATLAB for uncertainty quantification</li><li>Conducted detailed simulations of various aerodynamic bodies</li><li>Automated data-handling processes through Bash shell-scripting in Linux</li><li>Teaching assistant for undergraduate numerical methods course</li></ul>
